Selected portfolio

Additional portfolio

Lenze makes many things easy for you.

With our motivated and committed approach, we work together with you to create the best possible solution and set your ideas in motion - whether you are looking to optimise an existing machine or develop a new one. We always strive to make things easy and seek perfection therein. This is anchored in our thinking, in our services and in every detail of our products. It's as easy as that!

1

Developing ideas

Are you looking to build the best machine possible and already have some initial ideas? Then get these down on paper together with us, starting with small innovative details and stretching all the way to completely new machines. Working together, we will develop an intelligent and sustainable concept that is perfectly aligned with your specific requirements.

2

Drafting concepts

We see welcome challenges in your machine tasks, supporting you with our comprehensive expertise and providing valuable impetus for your innovations. We take a holistic view of the individual motion and control functions here and draw up consistent, end-to-end drive and automation solutions for you - keeping everything as easy as possible and as extensive as necessary.

3

Implementing solutions

Our easy formula for satisfied customers is to establish an active partnership with fast decision making processes and an individually tailored offer. We have been using this principle to meet the ever more specialised customer requirements in the field of machine engineering for many years.

4

Manufacturing machines

Functional diversity in perfect harmony: as one of the few full-range providers in the market, we can provide you with precisely those products that you actually need for any machine task – no more and no less. Our L-force product portfolio, a consistent platform for implementing drive and automation tasks, is invaluable in this regard.

5

Ensuring productivity

Productivity, reliability and new performance peaks on a daily basis – these are our key success factors for your machine. After delivery, we offer you cleverly devised service concepts to ensure continued safe operation. The primary focus here is on technical support, based on the excellent application expertise of our highly-skilled and knowledgeable after-sales team.

A matter of principle: the right products for every application.

Lenze's extensive L-force product portfolio follows a very simple principle. The functions of our finely scaled products are assigned to the three lines Base-Line, State-Line or High-Line.

But what does this mean for you? It allows you to quickly recognise which products represent the best solution for your own specific requirements.

Powerful products with a major impact:
- Easy handling
- High quality and durability
- Reliable technologies in tune with the latest developments

Lenze products undergo the most stringent testing in our own laboratory. This allows us to ensure that you will receive consistently high quality and a long service life. In addition to this, five logistics centres ensure that the Lenze products you select are available for quick delivery anywhere across the globe. It's as easy as that!

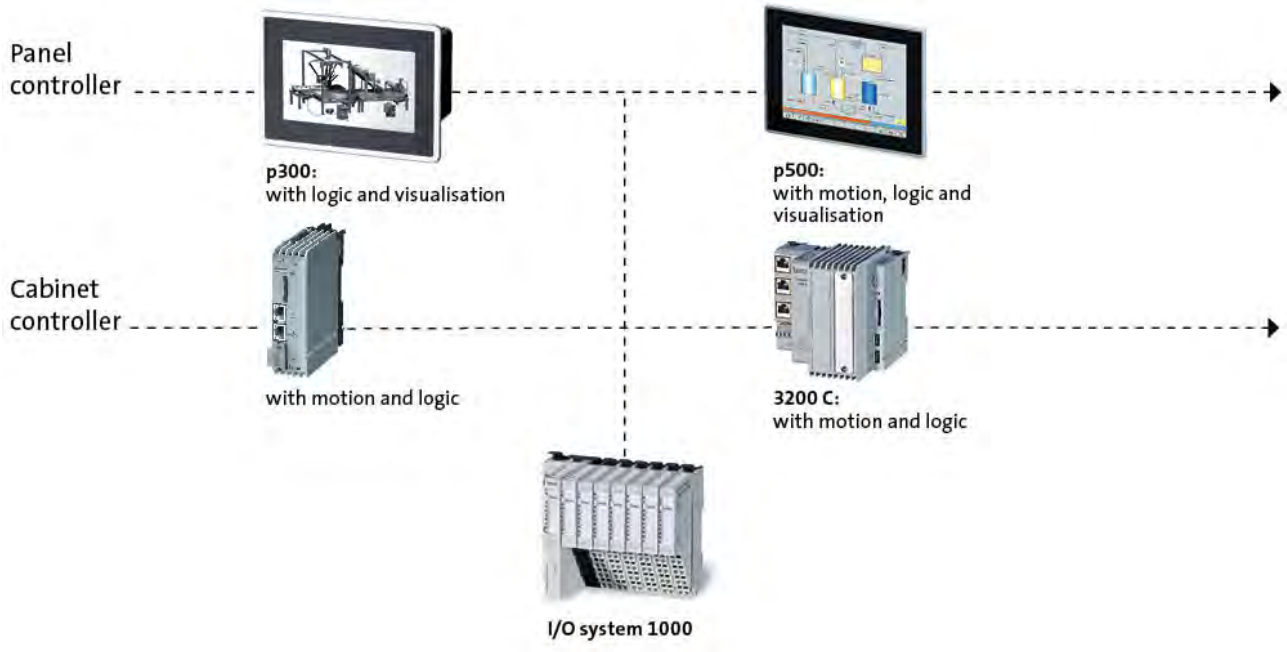
Automation with central motion control

Complex machines such as robots, packaging machines and handling systems require a powerfu, uniform and end-to-end automation system with a central control system. This allows coordinated movement of many axes and is also capable of performing control functions for a linear process. For project engineers, the central architecture offers the additional advantage that only one control program has to be developed and managed. We call this Controller-based Automation for central motion control.

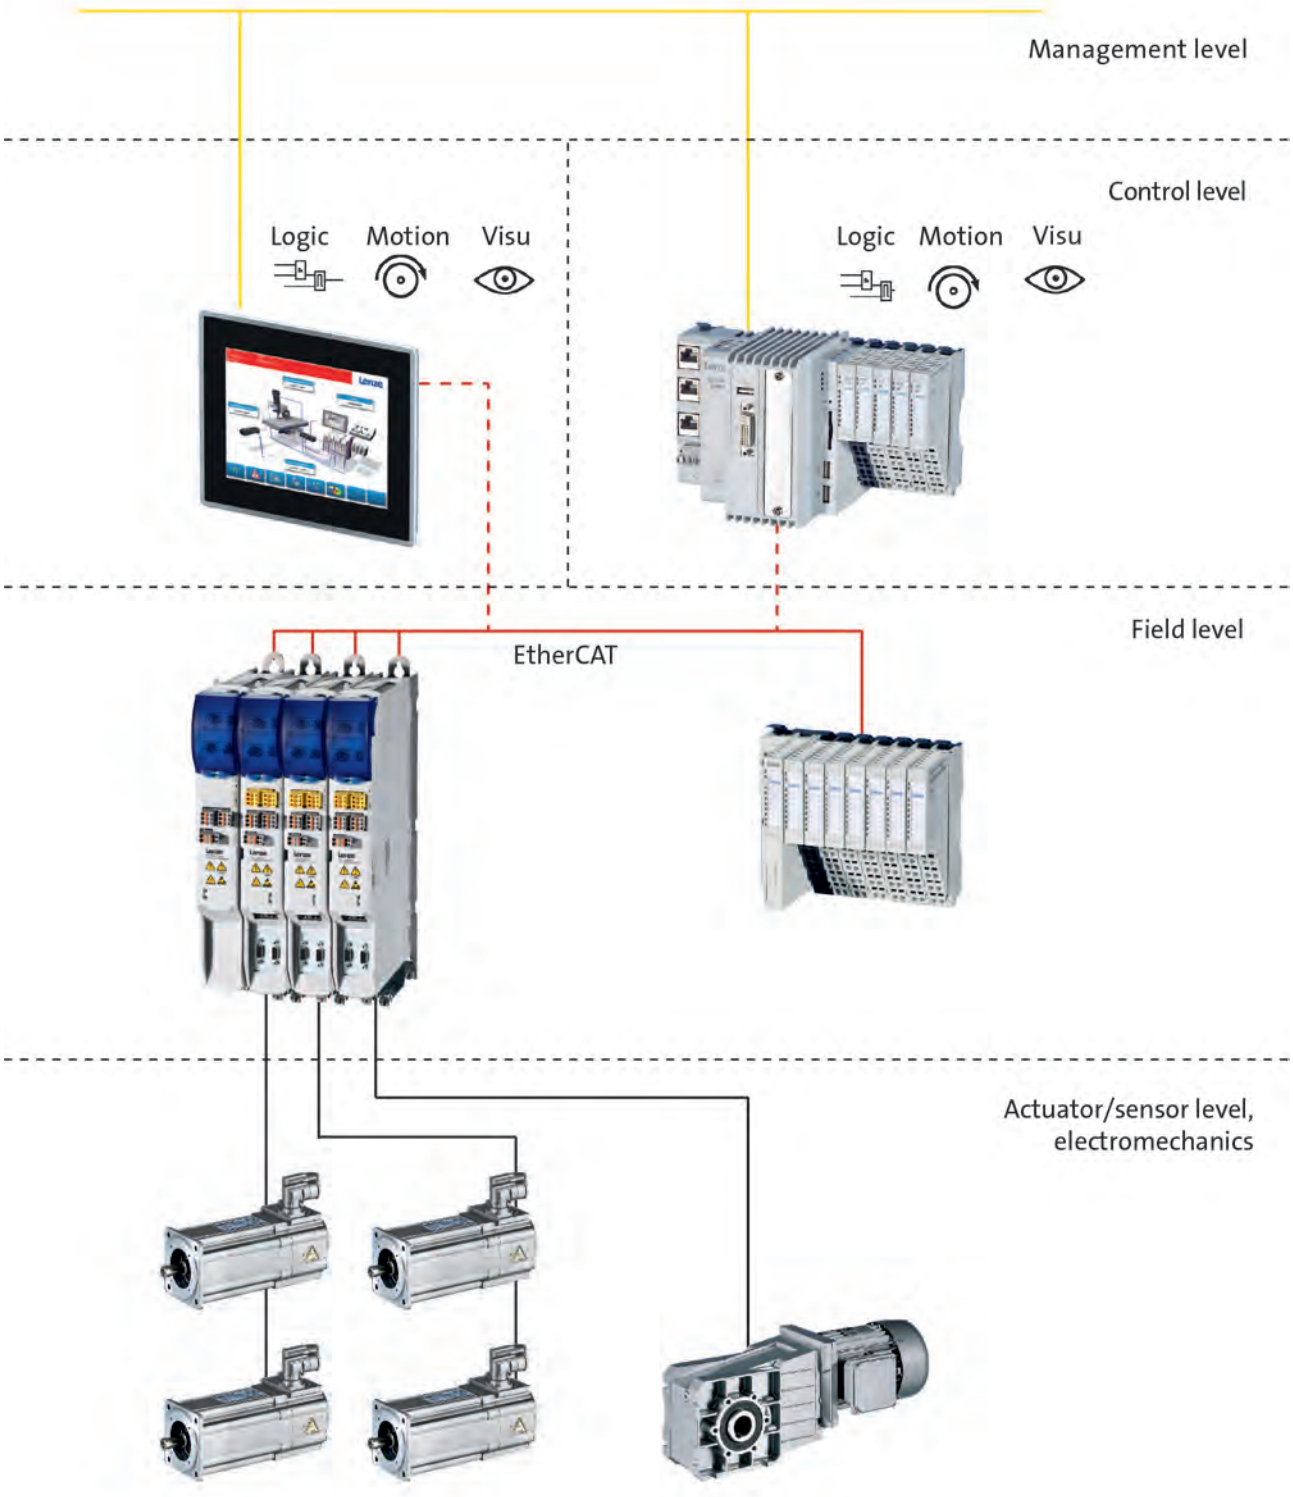
To address the increasing complexity of your automation tasks efficiently and cost-effectively, alongside a uniform, end-to-end automation system you also expect your automation supplier to provide you with advanced engineering tools and, if necessary, qualified support. Lenze offers you experienced experts in sales and support that can help you, whatever issues you are experiencing. No matter whether you are seeking support for project planning, dimensioning, selecting the right components or programming a mechatronic solution, we are here to help.

In Europe alone, customers have access to a network of over 100 highly-qualified application engineers with extensive expert knowledge and sector expertise. All-around service, training sessions and a helpline that can be accessed from anywhere in the world round off our portfolio of services.

Components in Lenze's Controller-based Automation system include the controllers, a wide range of inverters with matching standard three-phase AC motors, as well as synchronous servo motors and asynchronous servo motor, each of which can be combined with various types of gearboxes all the way up to decentralised I/O systems.



Automation with central motion control



General information

For Controller-based Automation, Lenze offers flexible solutions for system topologies. For self-sustaining solutions, simply rely on the bus systems used by Lenze such as the well-established CANopen or the fast, flexible EtherCAT.

In addition, Lenze offers easy integration into systems with higher-level controls or into existing systems.
The use of the Lenze Engineering tools can be provided for by any type of system bus. Each controller provides an additional Ethernet connection, enabling access of the Engineering tools to the controllers right down to the drives. Programming, commissioning, or diagnostics can therefore be carried out easily also in remote maintenance scenarios.

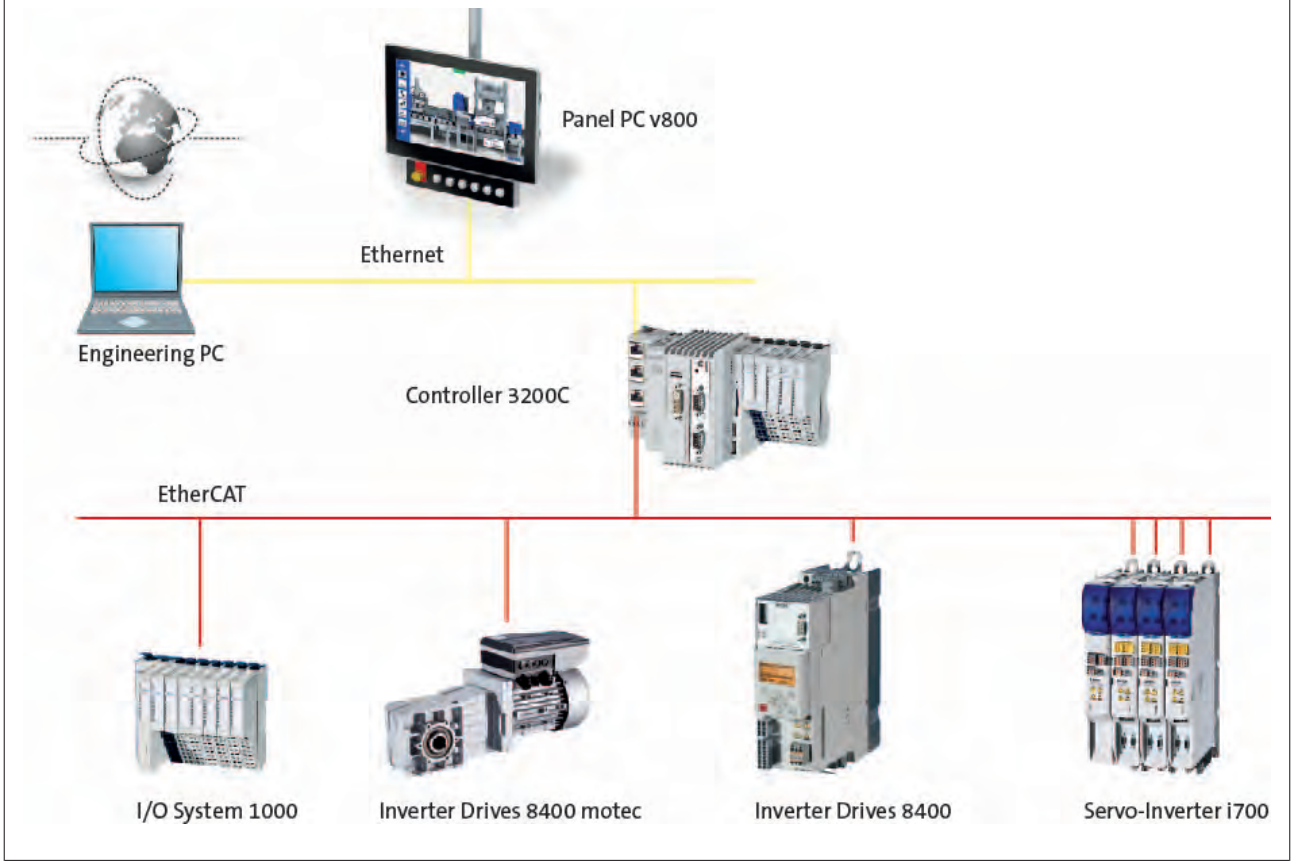
Standard topology with EtherCAT®

The Ethernet-based bus system EtherCAT® is the standard topology for Controller-based Automation applications and offers a large range of potential applications.

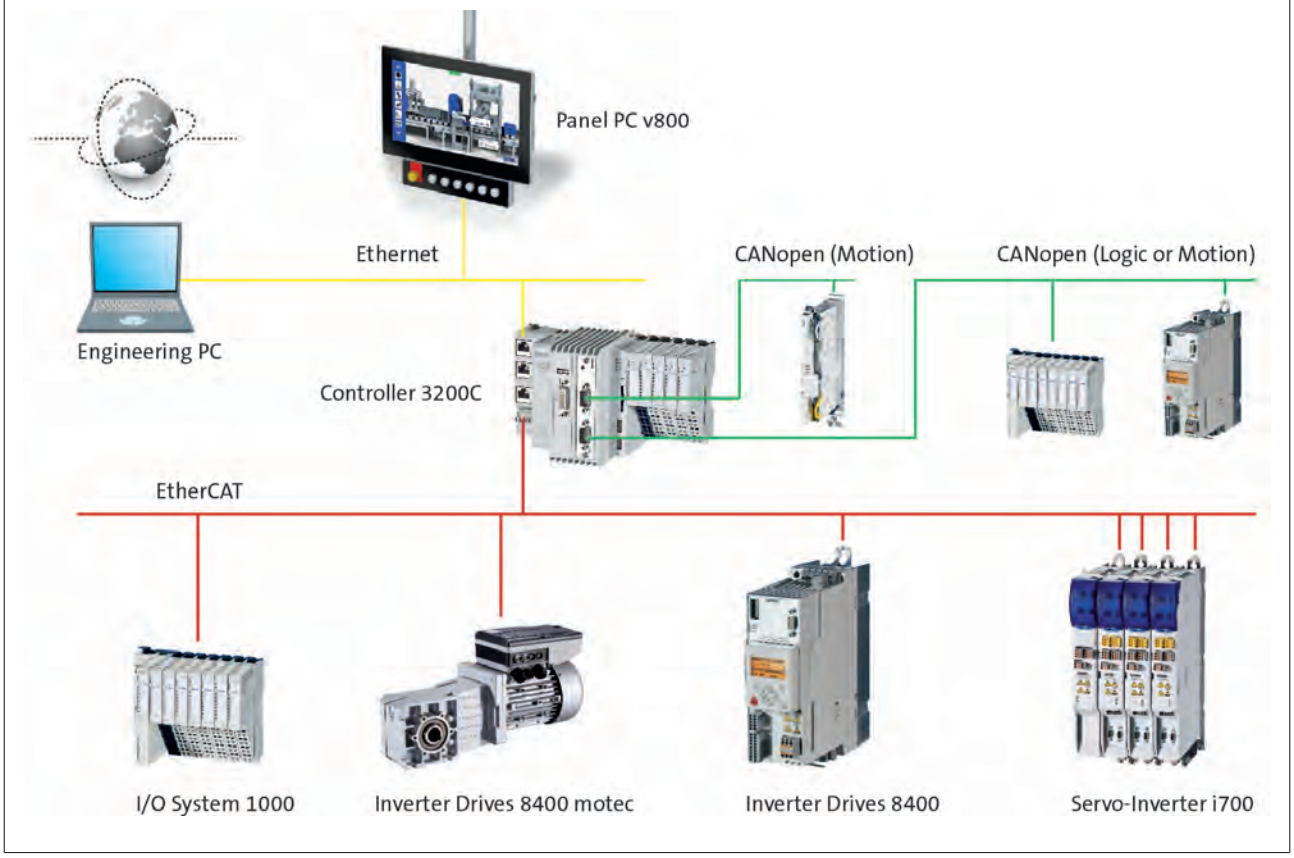
Topology with EtherCAT®



Advanced topology with CANopen

The tried-and-tested CAN bus comes as standard on many field devices. The controllers therefore allow CANopen to be used, some controllers even allow it in addition to the EtherCAT as a double master system. In this topology, a separation of motion and logic bus is recommended.

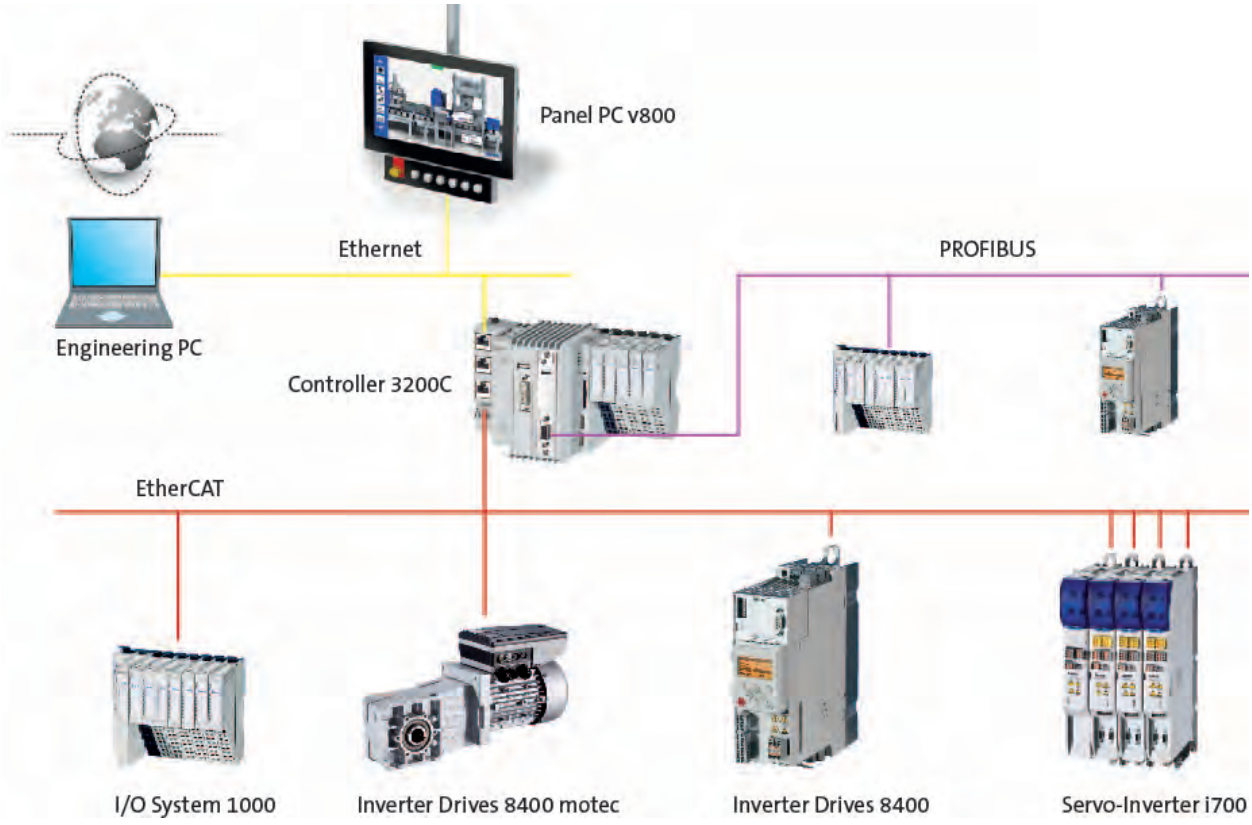
Topology with EtherCAT® and CANopen



Advanced topology with PROFIBUS

PROFIBUS is the most widely used fieldbus in today's automation technology industry. The choice of available field devices is immense. The expansion of control technology to include PROFIBUS means that this diversity is now also available within FAST Runtime.

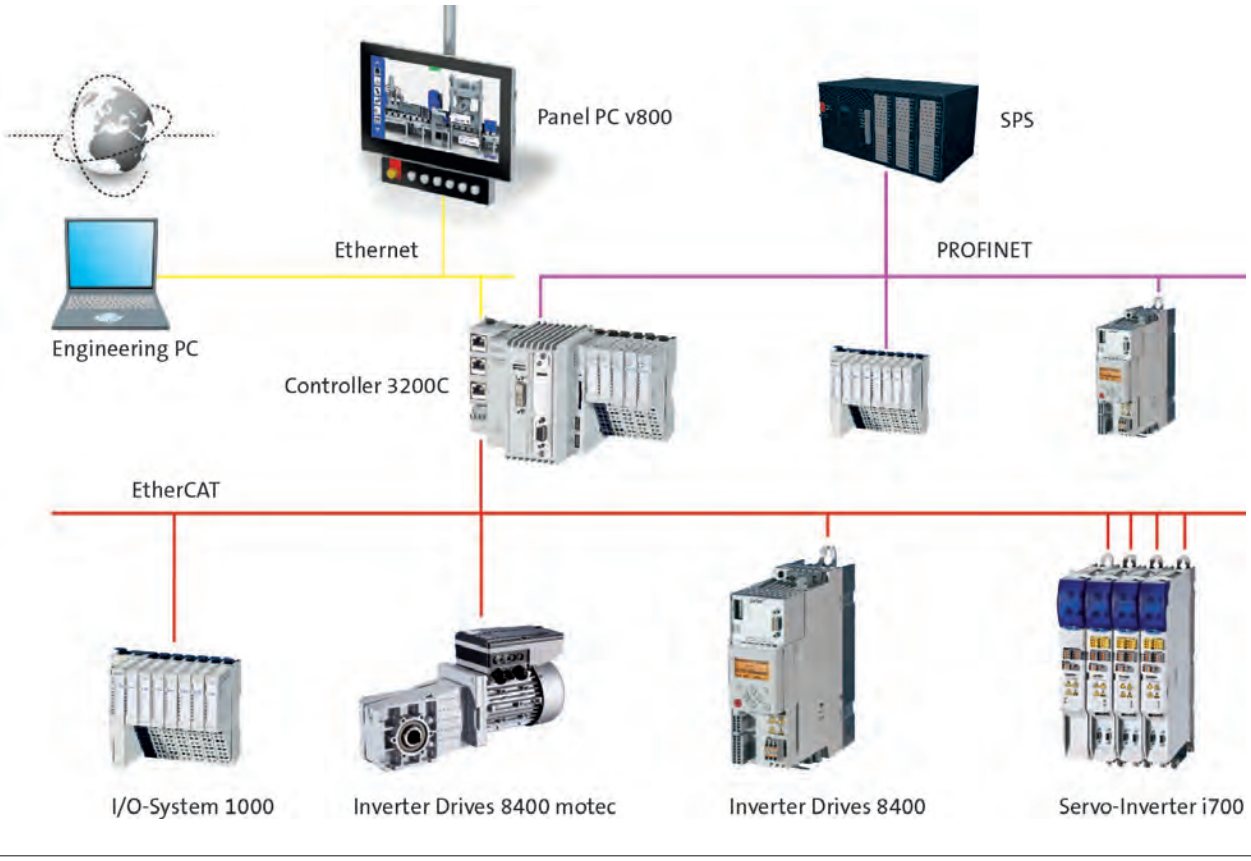
Topology with EtherCAT® and PROFIBUS



Extended topology with PROFINET

As a direct successor of PROFIBUS, PROFINET is becoming increasingly important. With this new generation, we are now also focusing on TCP/IP and Ethernet Standard in the field of communication. The direct integration of this interface makes it possible to integrate Lenze controllers quickly and easily into PROFINET systems.

Topology with EtherCAT® andPROFINET



The basis

The runtime software in a Controller determines the type of functions to be executed. The runtime software is available in the "FAST Runtime" and "Visu" versions.

FAST Runtime

The "FAST Runtime" runtime software enables the Controller to execute a sequence control (PLC functionality according to IEC 61131-3).

Moreover, Lenze FAST features licenced, predefined and already tested standard software modules (FAST technology modules) for an easy development of a modular machine control. FAST Motion modules (based on "PLCopen motion control) can be used to individually extend the functionalities of the FAST technology modules. – With Lenze FAST you only pay the functionalities you really need!

The PLC programming is carried out with the »PLC Designer« engineering tool. The FAST technology modules and FAST Motion modules are contained in »PLC Designer« function libraries and can be easily integrated into the machine program.

FAST Application Software

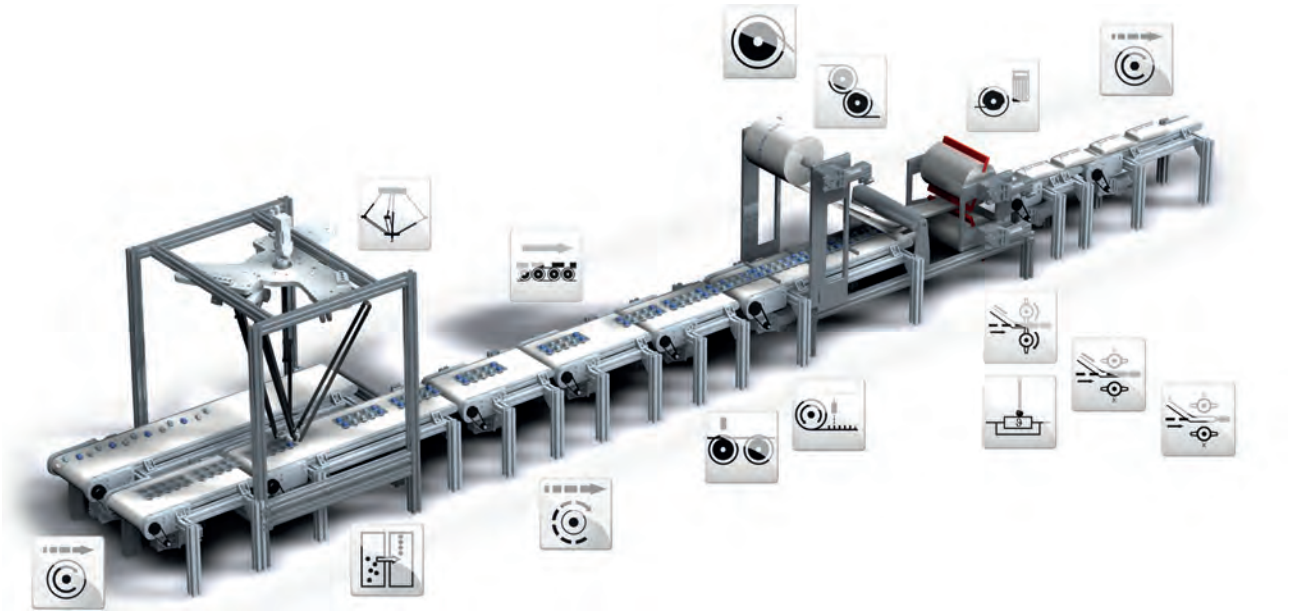
The topic of software is becoming increasingly important in developing machines as mechanical engineers are focusing more attention on efficient processes for creating the applications they need.

Lenze FAST (Feasibly Applicable Software Toolbox) provides Lenze standard software modules for easily developing a modular machine control.

For this purpose, the »PLC Designer« engineering tool with the "FAST Application Template" provides for an easy programming and commissioning as standardised software structure and with predefined technology modules. FAST Motion functions serve to implement individual extensions.

Highlights

- Up to 80 % of the software engineering for the motion control of the machine can be covered by standards.
- Considerable reduction of the development times for the basic drive functions
- Saved time can be invested in the further development of the special features of the machine.
- Predefined and tested software modules
- Structured programming
- Easier reuse and extension of programming segments
- Error reduction by tested software



FAST Application Template

The FAST Application Template is standardised by Lenze for a modularised and clear programming in the »PLC Designer«.

For a modular implementation of the mechatronic structure of an automation system, ready-made and reusable machine modules and module applications (e.g. a cross cutter) can be generated in the FAST Application Template.

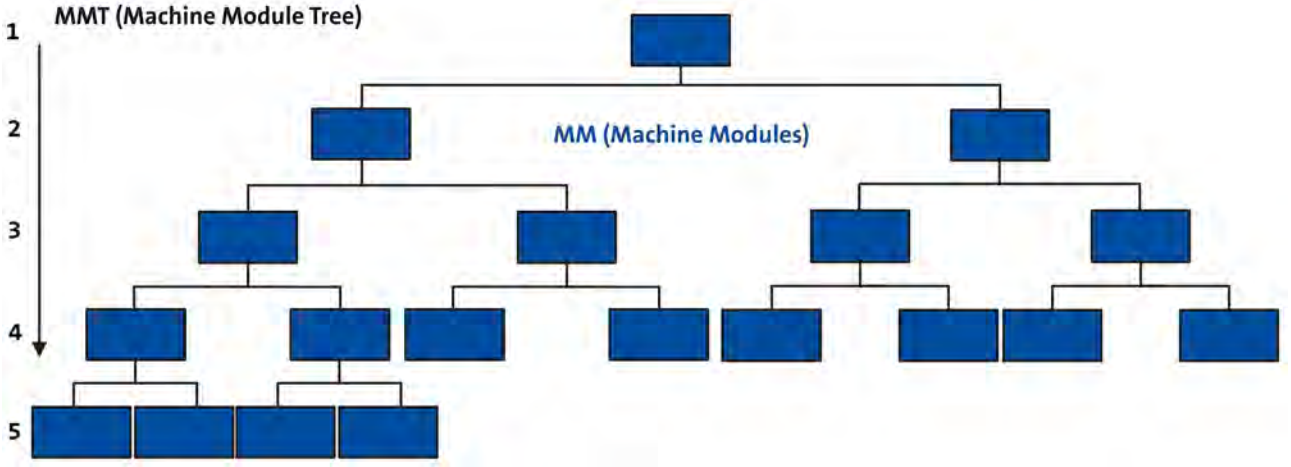
The FAST Application Template can be used via a library in the »PLC Designer« (from version 3.3). The library contains the structure and basic functionality of the FAST Application Template (as, for instance, state machine and error handling).

FAST Application Template elements

In order to map the automation system based on the FAST Application Template in the »PLC Designer«, the structure of the entire machine application has to be divided into machine modules. Each subfunction or drive function of the machine (e.g. "cross cutter" or "conveying belt") is mapped in one machine module.

A machine module always comes with at least one module application. Up to three module applications per machine module are possible.

The FAST Application Template supports two up to five hierarchy levels with up to 30 machine modules.



Example of a machine structure tree (MMT) with five levels

PackML standard

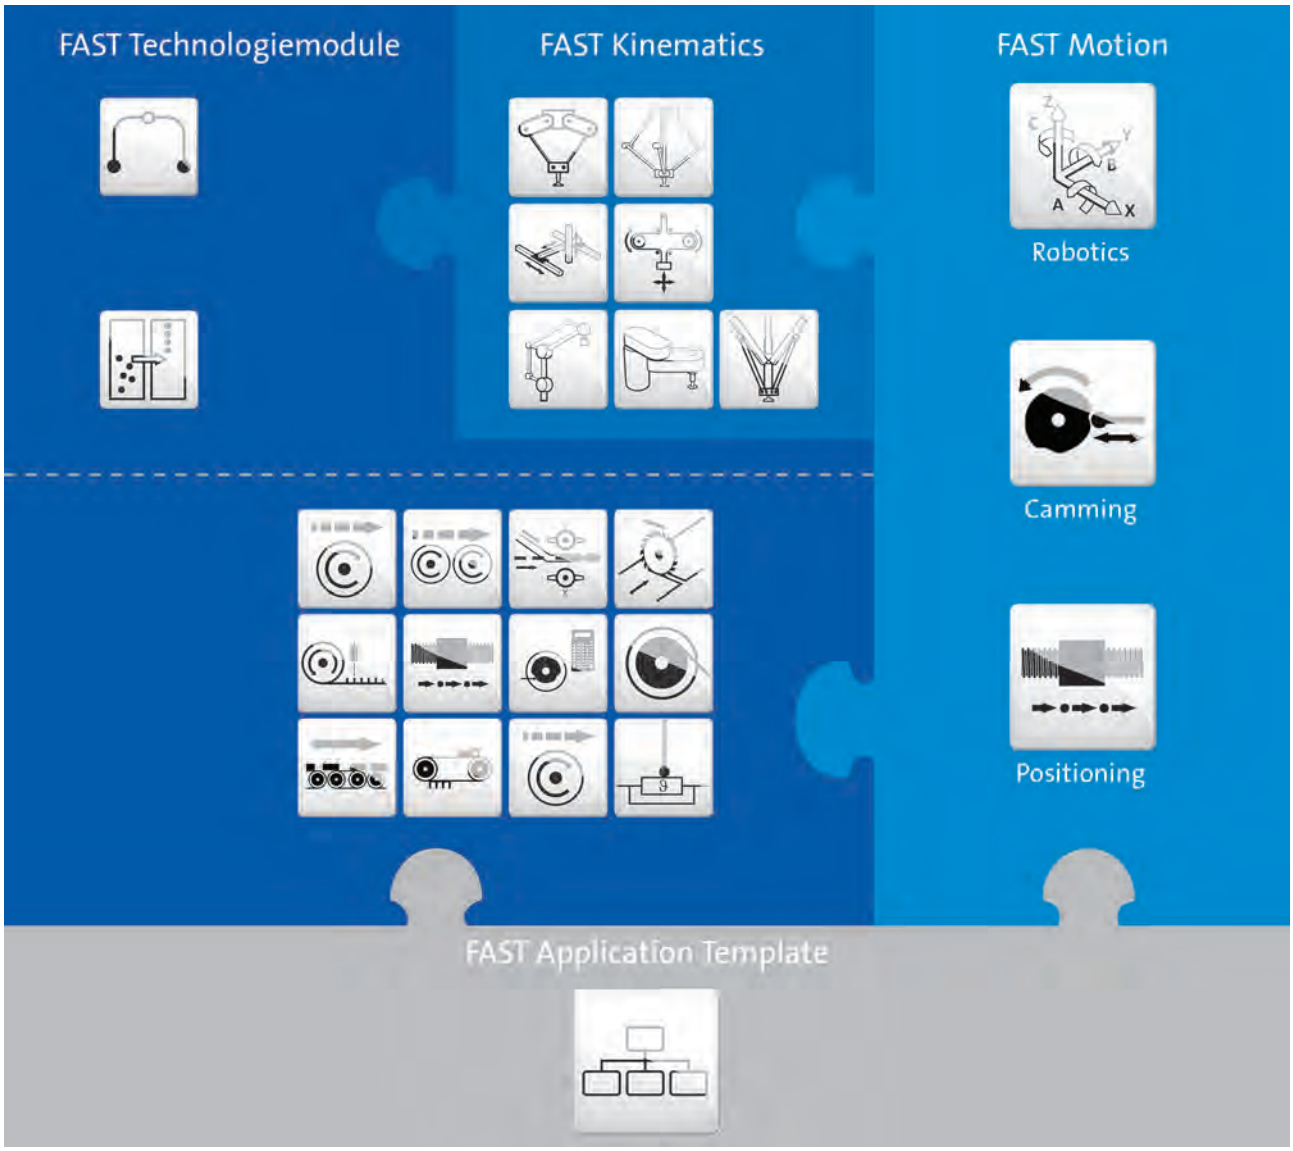
The FAST Application Template PackML standard is an extension that fulfils the requirements of the OMAC (Organization for Machine Automation and Control) user organisation for open and modular automation solutions for packaging machines according to the "PackML" standard.

FAST technology modules

The predefined FAST technology modules serve to easily implement the desired machine functions.

The FAST technology modules are standardised software modules for a modular programming of the machine control. A FAST technology module features a complete and pre-tested drive function.

Integrated basic functions and an integrated visualisation provide for an easy commissioning and testing of the modules. The reusability of the modules increases the quality of the software and considerably reduces the time required for programming, commissioning and testing.



The FAST technology modules are contained in the »PLC Designer« as independent function blocks in a library. They use the standardised interfaces and can thus be easily integrated into the machine program, combined in any way and extended individually with FAST Motion functions.

Using the FAST technology modules requires a licencing via Application Credit, see controller accessories.

FAST technology modules

Each FAST technology module contains the basic functions manual jog, homing and positioning for the drives.

The following technology modules are available for applications with the motion control of a single drive axis:

Single drives

Technology module		Function
Virtual Master		Implementation of a virtual master axis in the machine
Basic Motion		Provides easy basic motion functions: Manual jog, homing, absolute and relative positioning, continuous travel
Electrical Shaft		Synchronisation and coupling of drives with precise speed and positioning.
Flex Cam		Implementation of one or several electric cams. Flexible management of curves created online and offline.
Cross Cutter		Synchronised movements of drives for cross-sealing and/or cross-cutting of products.
Register control		Implementation of a clock-synchronised drive for generating a register control with print mark detection.
Winder Dancer		Implementation of a winding drive with dancer position control and/or a winding drive with tensile force/speed control
Table Positioning		Positioning profiles for single axes with smoothing and touch probe positioning
Flying Saw		Cutting and processing of material while moving
Temperature Control		Control of the temperature of a system that is provided with a heating element and a thermal sensor.
Smart Track		Distribution of products via several conveying belts. An intelligent distribution results in optimum packaging of products.
Magic Track		The preparation of single products to package them in groups. Is implemented comfortably with the two-pass conveyor.

FAST technology modules

Coordinated multi-axes drives

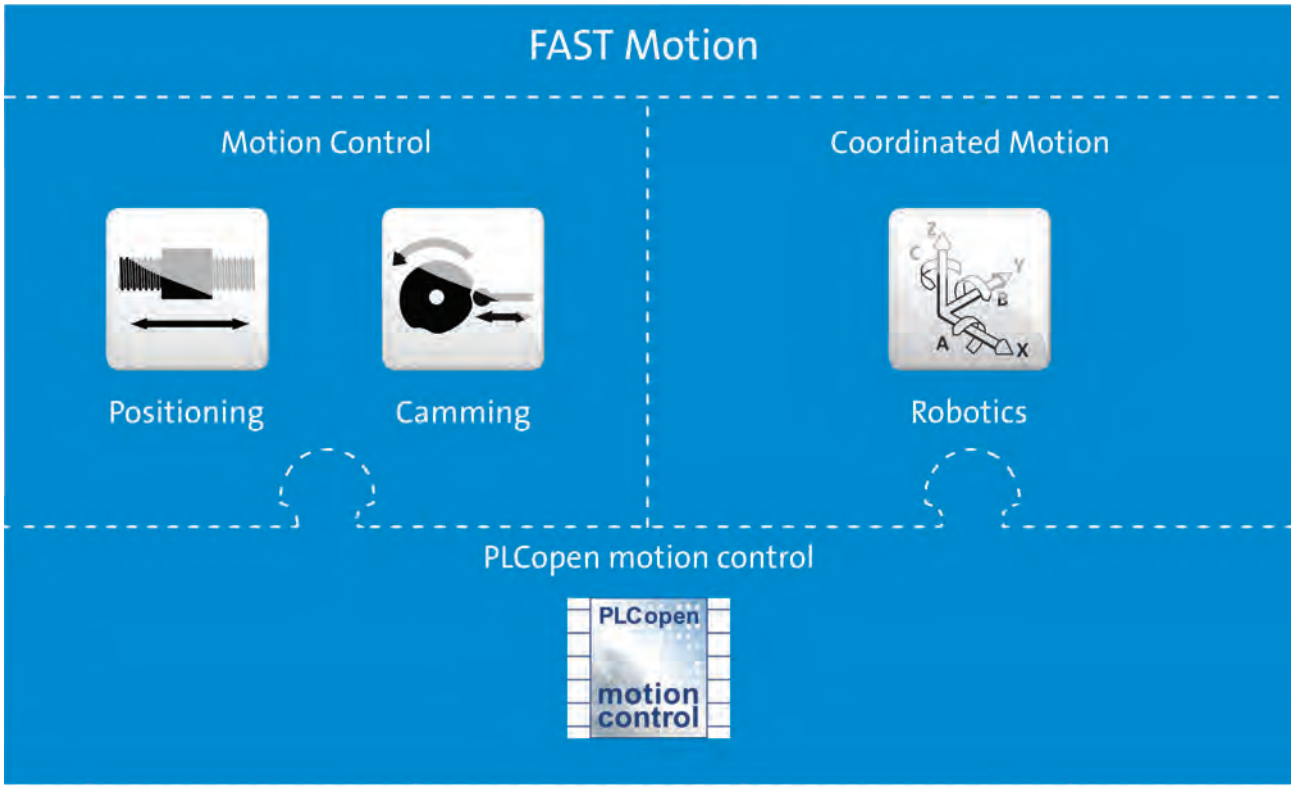
Technology module		Function	Kinematics		Function
Pick&Place		Implementation of complex three-dimensional movements by means of profiles for up to four drives with different kinematics.	Portal		Universal Cartesian portal kinematics with 2, 3 and 4 degrees of freedom for Pick&Place with high load capacities and big workspaces
			Belt		Universally usable belt kinematics with 2 degrees of freedom *
			Delta 2		Parallel kinematics with 2 degrees of freedom * for highly dynamic Pick&Place tasks
			Delta 3		Parallel kinematics with 3 degrees of freedom * for highly dynamic Pick&Place tasks
			LinearDelta 3		Parallel kinematics with 3 degrees of freedom with linear axes for dynamic pick & place tasks.
			Scara		Universal serial Scara kinematics with 2 and 3 degrees of freedom
			Articulated P		Special form of an articulated arm kinematics with 4 degrees of freedom especially suitable for palletizing
Track Pick & Place		Implementation of gripper movements which, for instance, pick up workpieces from a conveying belt and place or position them onto another conveying belt			

* Further degrees of freedom in preparation.

FAST Motion

FAST Motion provides full flexibility and scalability for machine programming and comprises optimised function blocks based on "PLCopen motion control":

- "Motion Control" modules (based on PLCopen Motion Control (formerly part 1+2) are optimised for the basic functions "positioning" and "cams" (synchronising).
- "Coordinated Motion" modules (based on PLCopen Coordinated Motion (part 4) are optimised for multi-axis coordinated three-dimensional movements – which can also be controlled via the FAST technology module "Pick & Place".



If the functionalities of the FAST technology modules are not sufficient, they can be supplemented individually with FAST Motion modules. This serves to easily create the machine function with preplanned standards. Thus, FAST frees up time for what really matters.

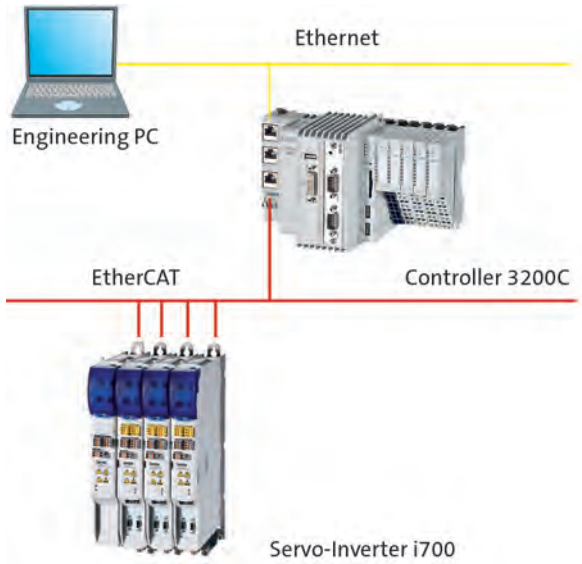
The »PLC Designer« contains the "Motion Control" module in two libraries and the "Coordinate Motion" modules in one library. Detailed information on the library functions and the functional range of the technology modules can be found in the online help of the PLC Designer.

Functions and features

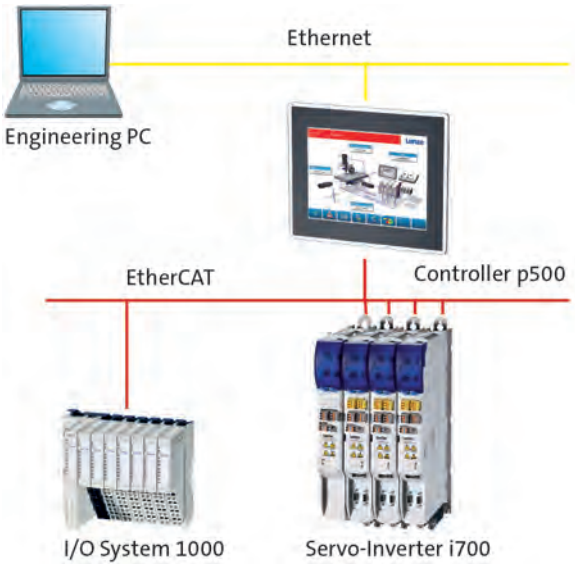
Servo-Inverter i700

The Servo-Inverter i700 is implemented into the Controller-based Automation solution via the Ethernet-based EtherCAT® bus system. Thus, a large variety of technology applications can be adopted via the implemented controller.
The »PLC Designer« engineering tool serves to program the FAST Motion functions.

Controller 3200 C with Servo-Inverter i700



Controller p500 with Servo-Inverter i700



For the different controllers, cycle times of the setpoint selection depend on the number of axes and the functionalities. The following table shows typical values for "Motion Control" (based on PLCopen Motion Control, formerly Part 1+2) and "Coordinated Motion" (based on PLCopen Coordinated Motion, Part 4).

Mode						
Controller			3221 C	3231 C	3251 C	p500
Min. cycle time PLCopen part 1,2: Motion Control						
2 axes	t	[ms]	1			
4 axes	t	[ms]	1			
8 axes	t	[ms]	1			
12 axes	t	[ms]	2	1		
16 axes	t	[ms]	2			
32 axes	t	[ms]	3			
64 axes	t	[ms]	6	5		
Min. cycle time PLCopen part 4: Coordinated Motion						
2 axes	t	[ms]	2	1		
4 axes	t	[ms]	2	1		
8 axes	t	[ms]	3	2		

Handling, commissioning and diagnostics

The Controller-based Automation solution can be easily commissioned and optimised with the PLC Designer and »EASY Starter« engineering tools.
The entire plant is commissioned via the Ethernet terminal of the Controller. By this means, the entire plant will be made available.
When the plant is used for the first time, it can be subsequently optimised using the »EASY Starter«.

Drafting concepts

Finding the right solution together
- Individual consulting service by the Lenze field service.
- Joint analysis and definition of the machine topology.
- Basic functions of the FAST modules as basis.
- Consistent automation and drive solution.

Implementing solutions

Consistent engineering using the »PLC Designer«
- Control and drive application with only one tool.
- Creating an application easily using the FAST modules.
- All Lenze motor data is available.
- The oscilloscope function within the inverter supports the assessment and optimisation of the settings.

Manufacturing machines

Commissioning via USB stick
- The prepared USB stick provides for the
  - transfer of the control software.
  - parameter setting and firmware download for connected field devices.
- The complete machine can be prepared, configured and parameterised in an automated fashion.
- Plug in USB stick, start machine, wait, finished.

Ensuring productivity

Easy diagnostics - »EASY Starter«
- Support by the service technicians in commissioning and maintenance.
- Easy parameter setting and commissioning.
- Online diagnostics without the risk of an accidental application change.

Device exchange without tools
- Thanks to automated firmware and parameter download.
- The SD card of the Controller provides for an easier device exchange.
- Possible without any specific know how and software.
- No data of the machine gets lost.

General information

Product information

Visualisation solutions with the industrial PC v800

Machine visualisations with the v800 industrial PCs can be easily scaled and realised in an optimal manner for the machine. The various screen diagonals and processor capacities are tailored to the requirements of modern machine control. As a stand-alone type (Protec) or embedded panel (Cabinet), they will fit into any machine concept. All devices are equipped with cutting-edge multi-touch glass sensors that can be operated even with gloves on and the operating program can be set up intuitively using the engineering software VisiwinNet.

The high-quality solution – v800-protec

An appealing, elegant device design with IP65 degree of protection and a shape that ensures ease of cleaning results in a product that offers simple elegance with maximum functionality and the best possible platform for demanding user interface concepts. A high degree of standardisation guarantees maximum availability and protection of software investments over a long period of time.

The highlights

- High-resolution full HD displays in 17.3" and 24.0"
- Maintenance-free thanks to no rotary components
- IPC type with low-power Intel Mobile processors
- Complies with hygienic design guidelines, no visible screws, IP65 degree of protection
- Individualisation via optional switch box

High-quality, integrated into machine housing – v800-Cabinet

The Cabinet version is intended for installation in machine housing. With the same technical specifications as the v800-Protec, this version is an equivalent alternative. The frameless design with narrow edge ensures a streamlined and visually appealing integration thanks to the circumferential seal on the multi-touch glass pane.

The highlights

- High-resolution full HD displays in 17.3" and 24.0"
- Maintenance-free thanks to no rotary components
- IPC type with low-power Intel Mobile processors
- Complies with hygienic design guidelines, no chamfering, front panel, IP65 degree of protection

The high-performance industrial PC – the v800-Cabinet

The devices in this range are ideal for applications that require even more power. The front panels meet the high demands regarding the degree of protection. The innovative cooling method comprising aluminium housing on the rear and durable fans guarantee optimal heat dissipation while ensuring maximum performance.

The highlights

- High-resolution displays in 13.3”, 15.4" and 21.5”
- Solid-state disk
- IPC with high-performance industrial Intel processors
- Fan cooled for maximum performance, easily swappable
- Front panel IP65 degree of protection

Visualisation

General information

Product information

Visualisation solutions with monitor

The v200 monitors depict the visualisation created on the upstream IPC. All the required functions are transferred to the monitors and scaled to suit the features of the v800 industrial PC family. A visually uniform line from the industrial PC to the monitor enables uniform machine design. They are available both as embedded panel (Cabinet) or as stand-alone (Protec) versions. All devices are equipped with cutting-edge multi-touch glass sensors that can be operated even when wearing gloves.

The modern monitor – v200-Protec

An appealing, elegant device design with IP65 degree of protection and an easy-to-clean design results in sleek elegance with maximum functionality and the best possible platform for demanding user interface concepts. A high degree of standardisation guarantees maximum availability and protection of investments over a long period of time.

The highlights

- High-resolution full HD displays in 17.3" and 24.0"
- Standard HDMI or DisplayPort connection
- Optional mounting up to 100 m from control cabinet PC via integrable Extender
- Complies with hygienic design guidelines, no visible screws, IP65 degree of protection

Modern integrable monitor – v200-Cabinet

Designed for direct installation into machine housing, these devices offer an alternative platform as they have the same technical specifications and options as the v200-p series. The frameless design with narrow edge ensures a streamlined and visually appealing integration thanks to the circumferential seal on the multi-touch glass pane.

The highlights

- High-resolution full HD displays in 17.3" and 24.0"
- Standard HDMI or disply port connection
- Optional installation up to 100 m from control cabinet PC via integrable Extender
- Complies with hygienic design guidelines, no chamfering, IP65 degree of protection on front panel

DBaseT Extender kit

The HDBaseT Extender can be optionally retrofitted to the monitors v200-C and v200 –P. This expansion in the form of a transmitter and receiver module enables digital image and USB 2.0 signals to be transferred up to 100 m via a network cable using the HDBaseT standard.

Transmission of DisplayPort / HDMI / DVI video and USB (2.0) signal
- Transmission length: max. 100 m
- Easy installation: plug and play, no software driver required
- Easy installation: TX module on DIN rail, RX module is inserted into module slot on the rear of the monitor

Version	Characteristics	Product key
HD BaseT Extender kit	HDBase-T transmitter (TX) • Control cabinet mounting via DIN rail • 1 x HD Base-T transmitter (TX) • 1 x DisplayPort > HDMI cable (100 cm) • 1 x USB host > USB slave cable (100 cm) • 1 x 24 VDC connector	EPCZEBE1
	HDBase-T receiver (RX) • Snap-in installation slot in monitor • 1 x HD Base-T receiver (RX) • 1 x HDMI > HDMI cable (25cm) • 1 x USB host > USB slave cable (10 cm) • 1 x 24 VDC supply cable (10 cm) • 1 x 24 VDC connector	

Transmission cable for HDBaseT Extender

The following CAT cables are recommended for operation:
- CAT6a cable, maximum cable length up to 80 m, 24AWG/27AWG, shielded
- CAT7 cable, maximum cable length up to 100 m, 24AWG, shielded

Transmission cable for v200 monitor

A Display Port (DP) or HDMI cable and USB cable can be used to connect the v200 monitors:

Version	Characteristics	Product key
DP/DP cable	• Length: 3 m for connection via DisplayPort	EWL0091
	• Length: 5 m for connection via DisplayPort	EWL0092
HDMI/HDMI cable	• Length: 3 m for video connection via HDMI	EWL0093
	• Length: 5 m for video connection via HDMI	EWL0094
USB (host/slave)	• Length: 3 m for touch and external devices on monitor	EWL0095
	• Length: 5 m for touch and external devices on monitor	EWL0096

T-Adapter

The support arm is required to mount the v800-Protec and v200-Protec on a standard 48 mm stainless steel tube. It has an integrated tilting device to tilt the display unit and can be rotated +/- 90° using the quick release clamping screw. This type is designed for use in support arm constructions with the IP65 degree of protection. The support arm adapter is supplied in series for hanging mounting but can be adapted for vertical mounting in just a few steps.

T-Adapter with switch box

The switch box is designed to expand the T-Adapter with standard 22 mm command elements. Like the console, the switch box has a screwless design. Thanks to easy removal of the front unit and by tearing the perforated installation opening, up to seven standard command elements (e.g. for 6 pushbuttons and 1x emergency-off switch) can be fitted. The labelling on the command elements can be individualised using slide-in strips.

Version	Characteristics	Product key
T-Adapter	• Mounting on 48 mm tube, either hanging or vertical	EPCZMP1
T-Adapter 17" with switch box	• Mounting on 48 mm tube, either hanging or vertical • 7x command elements • The switch box is prepared for the recording of standard 22.5-mm command elements. • Standard pushbuttons and switches can be installed. • The command elements are not included in the scope of supply.	EPCZEBT801-000
T-Adapter 24" with switch box	• Mounting on 48 mm tube, either hanging or vertical • 7x command elements • The switch box is prepared for the recording of standard 22.5-mm command elements. • Standard pushbuttons and switches can be installed. • The command elements are not included in the scope of supply.	EPCZEBT901-000
Tool for T-Adapter mounting	• Rotates the mounting tube 180°.	EPCZMB5

Visualisation

Visualisation software

VisiWinNET® Smart

Machines are almost exclusively equipped with visual operating units. Creating a machine visualisation used to be a subtask of control programming, but today it has developed into a core autonomous discipline. Interfaces that were often technically overloaded and could only be operated by experts have given way to user-oriented visual machine operation and have therefore become an important sales argument. VisiWinNET® Smart is the ideal tool for this task.

3.1

Advantages of visualisation software:

- Intuitive project planning:
  the integrated development environment of VisiWinNET Smart offers all functions under one roof. The graphics designer for visualisation pages and all other editors and tools are grouped into a flexible, modern window layout with dockable elements that also enables the use of multiple monitors.

- Intelligent data exchange
  Project data such as variables, texts or alarms can easily be exchanged with other programs. The transfer of variables directly from the control project goes hand-in-hand with easy exchange of data with Microsoft Excel using the Windows clipboard.

- Parallel installation
  Various VisiWinNET versions can be installed alongside one another on one computer. New projects can always be developed using the latest version and older ones are supported.

- Modern software architecture
  VisiWinNET® SMART comprises a development system with a full-graphics integrated development environment and a runtime licence scalable to the scope of the project. For the v800 industrial PCs, single user and client server solutions can be realised with the standard framework.

- ... and if you need a bit more:
  For tasks that go beyond the scope of VisiWinNET® Smart, it is possible to expand the software to suit your individual needs with the expert tools VisiWinNET® Professional. If you require this, please get in touch with your Lenze contact person. We would be happy to make you an offer for a solution that meets your needs.

VisiWinNET® Smart main components:

- Process communication for technical process monitoring
- Language options for international use
- Alarm management, data logging and trend recording for plant controlling
- Recipe management and user management

VisiWinNET® Smart development system

The integrated development environment of VisiWinNET® SMART is offered in the form of single user and client/server applications for the creation of visualisations. Please specify the respective option when ordering the engineering software.

Version	Development system	Target system	Product key
VisiWinNET® SMART	• Single user licence • Operating system engineering software: Windows® 7, Windows® 8 • Licencing: USB dongle	• Single user licence Windows® 7, Windows® 8	7710120065
	• Single user licence • Operating system engineering software: Windows® 7, Windows® 8 • Licencing: USB dongle	• Client/Server Windows® 7, Windows® 8	7710130065
	• Upgrade	Single user licence on client/server	7710131065
VisiWinNET® Professional			On request

VisiWinNET® Runtime licences

To realise your machine visualisation developed with VisiWinNET® Smart, your Lenze industrial PC requires the respective VisiWinNet® Runtime. The number of power tags, i.e. the data that needs to be exchanged with the control system, should be selected depending on the scope of the project.
For data exchange in networked environments, the runtime system also has an additional OPC server interface. Via this interface, higher-level systems can access process variables within the visualisation application and exchange relevant data, making connections to e.g. an ERP system or data exchange between multiple machines easier.

Single user licences

Item description			Order code

Product information

The Controller 3200 C is the ideal platform for automation systems in the control cabinet. It is based on the Intel® processor Atom™, which makes it possible to implement a powerful computer architecture without force-cooling and other moving components even in the smallest of spaces. As a special touch it is possible to directly attach the I/O system 1000 without taking the detour via fieldbuses.

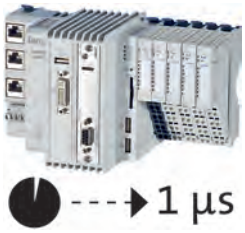
Variants
The Controller 3200 C comprises three versions. Together with our system modules, the variants 3221 C, 3231 C and 3251 C provide the basis for a powerful Motion controller – with and without an integrated visualisation! The controller version 3231 C is provided with an integrated DVI interface to which external monitors or monitor panels can be connected.

Integrated Ethernet switch
The integrated switch allows line topologies to be established using Ethernet without the need for a separate switch as an infrastructure component. In addition to this, a free interface provides allows a diagnostics device such as a service technician's laptop to be connected without having to access the bus physics.

I/O System 1000 as local I/Os
The extremely fast communication (48 Mbps) between the L-force Controller 3200 C and the I/O modules takes place via a proprietary, yet extremely efficient backplane bus. This allows individual and group access to the inputs and outputs and also enables precise synchronisation of the input modules, which attach a time stamp to the input signals with a resolution of 1µs and thereby ensure high-precision.

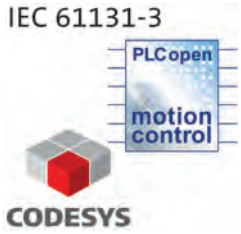
Product information

Logic (PLC), motion and visualisation in a single device
- Optimised for machine(modules) with central motion control
- Easy engineering thanks to central data storage



High-precision control for optimum manufacturing results
- Touch probe-compatible inputs
- High-precision output control
- Highly deterministic backplane bus with precise 1 µs time stamp

Easy to use
- Easy use of FAST via pluggable SD card with Application Credit for Motion Control or Coordinated Motion
- Automated standard set-up and data backup via USB stick
- Easy device replacement by means of the pluggable SD card with the corresponding Application Credit
- Diagnostics by implemented web server or EASY Starter



Prepared for the future thanks to compliance with industrial standards
- Programming in IEC61131-3
- Motion Control as per PLCopen
- PLC Designer based on CODESYS3

Communicative
- EtherCAT® as a fast bus system directly on board (in preparation)
- CANopen on board
- Precisely tailored by modular extension option

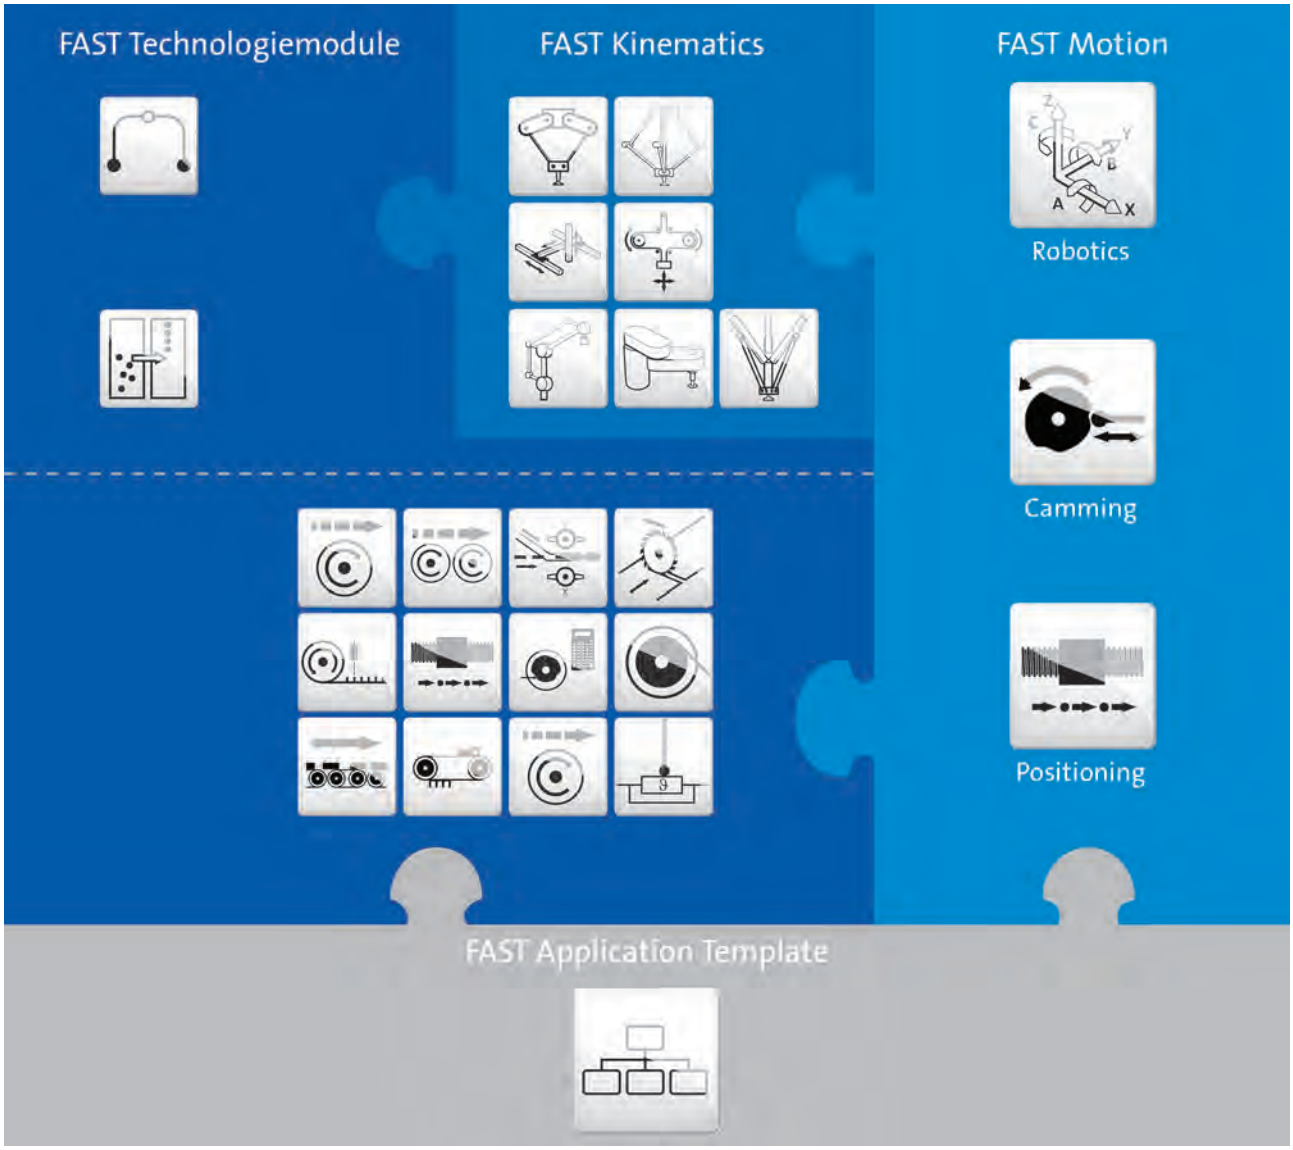
I/O system 1000 as local I/Os
- Permanent wiring due to separation of electronics and base module
- Fast diagnostics achieved thanks to clear labelling of the LEDs assigned to each channel
- Easy connection thanks to inclusion of printed circuit diagram
- Fully integrated shield connection without special shield terminals

Lenze FAST

Lenze FAST (Feasibly Applicable Software Toolbox) provides Lenze standard software modules for easily developing a modular machine control.

For this purpose, the »PLC Designer« engineering tool with the "FAST Application Template" provides for an easy programming and commissioning as standardised software structure and with predefined technology modules.

FAST Motion functions serve to implement individual extensions. The »EASY Starter« can be used to subsequently optimise and diagnose the system.



FAST Application Template

The FAST Application Template is standardised by Lenze for a modularised and clear programming in the »PLC Designer«.

The FAST Application Template can be used via a library in the »PLC Designer«. The library contains the structure and basic functionality of the FAST Application Template (as, for instance, state machine and error handling).

Lenze FAST

FAST technology modules

The predefined FAST technology modules serve to easily implement the desired machine functions.

The FAST technology modules are standardised software modules for a modular programming of the machine control. A FAST technology module features a complete and pre-tested drive function. Integrated basic functions and an integrated visualisation provide for an easy commissioning and testing of the modules. The reusability of the modules increases the quality of the software and considerably reduces the time required for programming, commissioning and testing.

The FAST technology modules are contained in the »PLC Designer« as independent function blocks in a library. They use the standardised interfaces and can thus be easily integrated into the machine program, combined in any way and extended individually with FAST Motion functions.

FAST Motion

FAST Motion provides full flexibility and scalability for machine programming and comprises optimised function blocks based on "PLCopen motion control":

- "Motion Control” modules (based on PLCopen Motion Control (formerly part 1+2) are optimised for the basic functions "positioning" and "cams" (synchronising).
- "Coordinated Motion" modules (based on PLCopen Coordinated Motion (part 4) are optimised for multi-axis coordinated three-dimensional movements – which can also be controlled via the FAST technology module "Pick & Place".

If the functionalities of the FAST technology modules are not sufficient, they can be adapted and extended individually using the FAST Motion modules. These modules are capable to program any number of functions.

The »PLC Designer« contains the "Motion Control" modules in two libraries and the "Coordinated Motion" modules in one library.

		• Licence for use of FAST Application Software, 2500 points	EPCZEMSD0L1250
		• Licence for use of FAST Application Software, 3000 points	EPCZEMSD0L1300
		• Licence for use of FAST Application Software, 4000 points	EPCZEMSD0L1400

Single drives

FAST technology modules

Technology module		Function	Points for use
Virtual Master		Implementation of a virtual master axis in the machine	25
Basic Motion		Provides easy basic motion functions: Manual jog, homing, absolute and relative positioning, continuous travel	
Electrical Shaft		Synchronisation and coupling of drives with precise speed and positioning.	
Flex Cam		Implementation of one or several electric cams. Flexible management of curves created online and offline.	50
Cross Cutter		Synchronised movements of drives for cross-sealing and/or cross-cutting of products.	100

Application Credit

FAST technology modules

Technology module		Function	Points for use
Register control		Implementation of a clock-synchronised drive for generating a register control with print mark detection.	100
Winder Dancer		Implementation of a winding drive with dancer position control and/or a winding drive with tensile force/speed control	
Table Positioning		Positioning profiles for single axes with smoothing and touch probe positioning	50
Flying Saw		Cutting and processing of material while moving	100
Temperature Control		Control of the temperature of a system that is provided with a heating element and a thermal sensor.	50
Smart Track		Distribution of products via several conveying belts. An intelligent distribution results in optimum packaging of products.	
Magic Track		The preparation of single products to package them in groups. Is implemented comfortably with the two-pass conveyor.	

Application Credit

FAST technology modules

Coordinated multi-axes drives

Technology module		Function	Kinematics		Function	Points for use
Pick&Place		Implementation of complex three-dimensional movements by means of profiles for up to four drives with different kinematics.	Portal		Universal Cartesian portal kinematics with 2, 3 and 4 degrees of freedom for Pick&Place with high load capacities and big workspaces	100
			Belt		Universally usable belt kinematics with 2 degrees of freedom *	
			Delta 2		Parallel kinematics with 2 degrees of freedom * for highly dynamic Pick&Place tasks	200
			Delta 3		Parallel kinematics with 3 degrees of freedom * for highly dynamic Pick&Place tasks	
			LinearDelta 3		Parallel kinematics with 3 degrees of freedom with linear axes for dynamic pick & place tasks.	
			Scara		Universal serial Scara kinematics with 2 and 3 degrees of freedom	
			Articulated P		Special form of an articulated arm kinematics with 4 degrees of freedom especially suitable for palletizing	
Track Pick & Place		Implementation of gripper movements which, for instance, pick up workpieces from a conveying belt and place or position them onto another conveying belt				300

FAST dimensioning

The FAST modules can be connected easily with the PLC Designer. Which module is to be selected, depends on the automation dimensioning of the machine. In order to define the correct Application Credit, the points of each module simply have to be added up. The required Application Credit is deducted each time a technology module is called.

Example 1:
- 1x Virtual Master (25 points)
- 1x Electrical Shaft (25 points)
- 2x Winder Dancer (200 points)
- 1x Cross Cutter (100 points)

Result: 350 points

Example 2:
- 1x Virtual Master (25 points)
- 1x Electrical Shaft (25 points)
- 2x Flex Cam (100 points)

Result: 150 points

Application Credit

FAST Motion

FAST Motion provides a scalable programming of function blocks based on "PLCopen Motion Control".
If you use the technology modules in the application, the basic functions of the FAST Motion are accessed both for single axes and for coordinated multi-axes systems.
If you do not want to use the technology modules for the motion control in your application, the application can, for instance, be implemented as well with your own program code on the basis of the FAST Motion.

Fast Motion		Function	Points for use
Motion Control		-	150
			
Coordinated Motion			300

If you use FAST technology modules, the Application Credit already includes the required function of the FAST Motion. In this case, no additional points have to be considered for the use of the FAST Motion.
If you use the FAST Motion as a basic function for the motion control, the points according to the FAST Motion table apply.

SD card and USB flash drive

SD cards and USB flash drives are available for data storage and data backups.

- ► A SD card is part of the scope of supply of the controller.
- ► SD card without Application Credit.

Mode		Features	Product key
Application Credit 0		• 512 MB	
USB flash drive		• 1 GB	EPCZEMUS4
		• 4 GB	EPCZEMUS6

24 V power supply unit

An external power supply unit is also available as an alternative for powering the controller's control electronics.

CAN bus connector

The connector is used to connect the CAN to inverters which are provided with a Sub-D connection for the CAN bus. An integrated CAN terminating resistor can be switched on/off. Internal spring terminals make the use of special mounting tools superfluous. The switch setting can be read from two sides.

Mode		Features	Product key
CAN bus connector: Node		• Sub-D, 90° • Screw terminals	EPM-T950
CAN bus connector: Terminating		• Sub-D, 90° • Screw terminals • Integrated terminating resistor	EPM-T951
CAN bus connector: Straight		• Sub-D, 180° • Screw terminals • Switchable terminating resistor	EPM-T952
CAN bus connector: Switch		• Sub-D, 90° • Spring-loaded terminal • Switchable terminating resistor	EWZ0046

MC cards

In addition to the available standard interfaces, the Controllers can be optionally extended with further fieldbuses. This enables a very universal implementation into the machine control. These fieldbuses can be ordered or retrofitted as MC cards.

Mode	Features	Product key
MC card	• 2 x CAN interface (MC-CAN2)	EPCZEBKM9
	• 1 x PROFIBUS master (MC-PBM)	EPCZEBKM5
	• 1 x PROFIBUS slave (MC-PBS)	EPCZEBKM6
	• 1 x PROFINET device (MC-PND)	EPCZEBKM8
	• 1 x RS232, RS422, RS485 (MC-ISI)	EPCZEBKMD
	• 1 x EtherNet/IP (MC-ETH)	EPCZEBKM1

Controller c300

General information

Product information

Based on the 3200 C, the c300 fits seamlessly into our platform which is built on a consistently modern system architecture. The benefits: within the Controller-based Automation system, the precisely tailored Controller c300 takes responsibility for all of your control tasks. It focusses primarily on basic control (PLC) and motion tasks. Space-saving and intelligent at the same time.

Highlights

- Small control system with I/O modules which can be connected in series and integrated master interfaces for EtherCAT and CanOpen
- Easy standard set-up and data backup via USB flash drive
- Can be extended with communication interface PROFINET-Device)
- uture-proof due to compliance with industrial standards
- High system-availability
  - Integrated UPS solution
  - Easy device replacement thanks to replaceable memory card
- No maintenance required thanks to batteryless and fanless design

3.4

I/O system 1000 as local I/Os

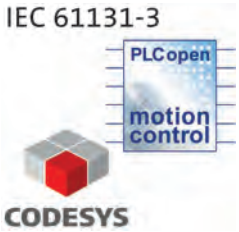
At a speed of 48 Mbps, which is extremely fast, the c300 controller and the I/O modules communicate with each other via an extremely efficient backplane bus. Like this, it is possible to mount a great variety of configurations of the IO system directly on the controller in a flexible fashion. Precisely tailored to your application.

Product information

Logic (PLC) and motion in a single device
- Optimised for machines/machine modules with central motion control
- Easy engineering thanks to central data storage

High-precision control for optimum manufacturing results
- Touch probe-compatible inputs
- High-precision output control
- Highly deterministic backplane bus with precise 1 µs time stamp

Easy to use
- Automated standard set-up and data backup via USB stick
- Easy device replacement by the pluggable SD card Application Credit 0
- Diagnostics via implemented web server or EASY Starter



Prepared for the future thanks to compliance with industrial standards
- Programming in IEC61131-3
- Motion Control as per PLCopen
- PLC Designer based on CODESYS3

Communicative
- EtherCAT® as a fast bus system directly on board (in preparation)
- CANopen on board
- Precisely tailored by modular extension option

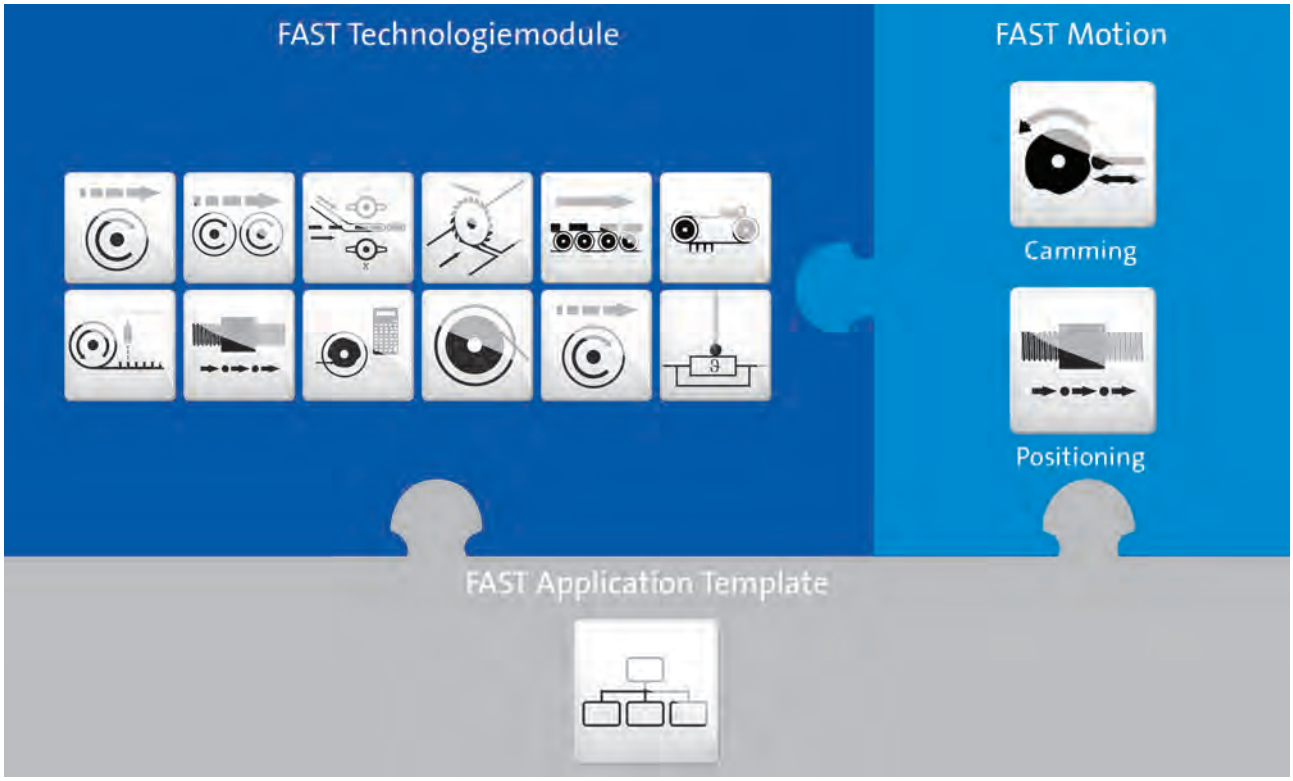
I/O system 1000 as local I/Os
- Permanent wiring due to separation of electronics and base module
- Fast diagnostics achieved thanks to clear labelling of the LEDs assigned to each channel
- Easy connection thanks to inclusion of printed circuit diagram
- Fully integrated shield connection without special shield terminals

Lenze FAST

Lenze FAST (Feasibly Applicable Software Toolbox) provides Lenze standard software modules for easily developing a modular machine control.

For this purpose, the »PLC Designer« engineering tool with the "FAST Application Template" provides for an easy programming and commissioning as standardised software structure and with predefined technology modules.

FAST Motion functions serve to implement individual extensions. The »EASY Starter« can be used to subsequently optimise and diagnose the system.



FAST Application Template

The FAST Application Template is standardised by Lenze for a modularised and clear programming in the »PLC Designer«.

The FAST Application Template can be used via a library in the »PLC Designer«. The library contains the structure and basic functionality of the FAST Application Template (as, for instance, state machine and error handling).

Lenze FAST

FAST technology modules

The predefined FAST technology modules serve to easily implement the desired machine functions.

The FAST technology modules are standardised software modules for a modular programming of the machine control. A FAST technology module features a complete and pre-tested drive function. Integrated basic functions and an integrated visualisation provide for an easy commissioning and testing of the modules. The reusability of the modules increases the quality of the software and considerably reduces the time required for programming, commissioning and testing.

The FAST technology modules are contained in the »PLC Designer« as independent function blocks in a library. They use the standardised interfaces and can thus be easily integrated into the machine program, combined in any way and extended individually with FAST Motion functions.

FAST Motion

FAST Motion provides full flexibility and scalability for programming and comprises optimised function blocks based on "PLCopen motion control":

- "Motion Control" modules (based on PLCopen Motion Control (formerly part 1+2) are optimised for the basic functions "positioning" and "cams" (synchronising).

If the functionalities of the FAST technology modules are not sufficient, they can be adapted and extended individually using the FAST Motion modules. These modules are capable to program any number of functions.

The »PLC Designer« contains the "Motion Control" modules in two libraries.

Application Credit

With Lenze FAST, technology modules for motion control are provided.
In order that these modules are used, the following Application Credit is required.
If different technology modules are used, the demand for Application Credit must be added for all modules used.

Mode		Features	Product key
Application Credit		• Licence for use of FAST Application Software, 100 points	EPCZEMSD0L1010
		• Licence for use of FAST Application Software, 150 points	EPCZEMSD0L1015
		• Licence for use of FAST Application Software, 200 points	EPCZEMSD0L1020
		• Licence for use of FAST Application Software, 300 points	EPCZEMSD0L1030
		• Licence for use of FAST Application Software, 400 points	EPCZEMSD0L1040
		• Licence for use of FAST Application Software, 500 points	EPCZEMSD0L1050
		• Licence for use of FAST Application Software, 600 points	EPCZEMSD0L1060
		• Licence for use of FAST Application Software, 700 points	EPCZEMSD0L1070
		• Licence for use of FAST Application Software, 1000 points	EPCZEMSD0L1100
		• Licence for use of FAST Application Software, 1200 points	EPCZEMSD0L1120
		• Licence for use of FAST Application Software, 1500 points	EPCZEMSD0L1150
		• Licence for use of FAST Application Software, 2000 points	EPCZEMSD0L1200
		• Licence for use of FAST Application Software, 2500 points	EPCZEMSD0L1250
		• Licence for use of FAST Application Software, 3000 points	EPCZEMSD0L1300

Single drives

FAST technology modules

Technology module		Function	Points for use
Virtual Master		Implementation of a virtual master axis in the machine	25
Basic Motion		Provides easy basic motion functions: Manual jog, homing, absolute and relative positioning, continuous travel	
Electrical Shaft		Synchronisation and coupling of drives with precise speed and positioning.	
Flex Cam		Implementation of one or several electric cams. Flexible management of curves created online and offline.	50
Cross Cutter		Synchronised movements of drives for cross-sealing and/or cross-cutting of products.	100

Application Credit

FAST technology modules

Technology module		Function	Points for use
Register control		Implementation of a clock-synchronised drive for generating a register control with print mark detection.	100
Winder Dancer		Implementation of a winding drive with dancer position control and/or a winding drive with tensile force/speed control	
Table Positioning		Positioning profiles for single axes with smoothing and touch probe positioning	50
Flying Saw		Cutting and processing of material while moving	100
Temperature Control		Control of the temperature of a system that is provided with a heating element and a thermal sensor.	50
Track Pick & Place		Implementation of gripper movements which, for instance, pick up workpieces from a conveying belt and place or position them onto another conveying belt	300
Smart Track		Distribution of products via several conveying belts. An intelligent distribution results in optimum packaging of products.	50
Magic Track		The preparation of single products to package them in groups. Is implemented comfortably with the two-pass conveyor.	

FAST dimensioning

The FAST modules can be connected easily with the PLC Designer. Which module is to be selected, depends on the automation dimensioning of the machine. In order to define the correct Application Credit, the points of each module simply have to be added up. The required Application Credit is deducted each time a technology module is called.

Example 1:
- 1x Virtual Master (25 points)
- 1x Electrical Shaft (25 points)
- 2x Winder Dancer (200 points)
- 1x Cross Cutter (100 points)

Result: 350 points

Example 2:
- 1x Virtual Master (25 points)
- 1x Electrical Shaft (25 points)
- 2x Flex Cam (100 points)

Result: 150 points

Application Credit

FAST Motion

FAST Motion provides a scalable programming of function blocks based on "PLCopen Motion Control".
If you use the technology modules in the application, the basic functions of the FAST Motion are accessed both for single axes and for coordinated multi-axes systems.
If you do not want to use the technology modules for the motion control in your application, the application can, for instance, be implemented as well with your own program code on the basis of the FAST Motion.

Fast Motion		Function	Points for use
Motion Control	 	-	150

If you use FAST technology modules, the Application Credit already includes the required function of the FAST Motion. In this case, no additional points have to be considered for the use of the FAST Motion.
If you use the FAST Motion as a basic function for the motion control, the points according to the FAST Motion table apply.

SD card and USB flash drive

SD cards and USB flash drives are available for data storage and data backups.

- ► A SD card is part of the scope of supply of the controller.
- ► SD card without Application Credit.

Mode		Features	Product key
Application Credit 0		• 512 MB	
USB flash drive		• 1 GB	EPCZEMUS4
		• 4 GB	EPCZEMUS6

24 V power supply unit

An external power supply unit is also available as an alternative for powering the controller's control electronics.

Product information

Control and visualisation combined in a compact unit.
We have taken yet another step towards creating an easier future with the p500 – a perfect combination of maintenance-free panel-mounted controller, logic (PLC), motion and visualisation in a single device. It is ideally suited for use as a control and visualisation system within Controller-based Automation systems, suiting applications with central motion control or as a visualisation device within a drive-based automation system.

Highlights
- Logic (PLC), motion and visualisation in a single device
- Machine-oriented and high-precision control for optimum manufacturing results
- Easy to use
- Prepared for the future thanks to compliance with industrial standards

Controller p500 - 38.1 cm (15")

Versions
The p500 device series encompasses 3 versions, which only differ in terms of their screen size. All other technical properties are absolutely identical.

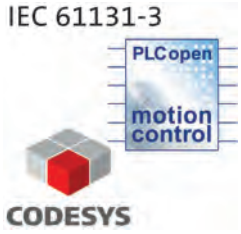
Integrated Ethernet switch
The integrated switch allows line topologies to be established using Ethernet without the need for a separate switch as an infrastructure component. In addition to this, a free interface provides allows a diagnostics device such as a service technician's laptop to be connected without having to access the bus physics.

Product information

Logic (PLC), motion and visualisation in a single device
- Optimised for machine(modules) with central motion control
- Easy engineering thanks to central data storage

Easy to use
- Easy use of FAST via pluggable SD card with Application Credit for Motion Control or Coordinated Motion
- Automated standard set-up and data backup via USB stick
- Easy device replacement by means of the pluggable SD card with the corresponding Application Credit
- Diagnostics by implemented web server or EASY Starter

High degree of system availability
- Maintenance-free
- Fanless
- No battery



Prepared for the future thanks to compliance with industrial standards
- Programming in IEC61131-3
- Motion Control as per PLCopen
- PLC Designer based on CODESYS3

Communicative
- EtherCAT® as a fast bus system directly on board (in preparation)
- CANopen on board
- Precisely tailored by modular extension option

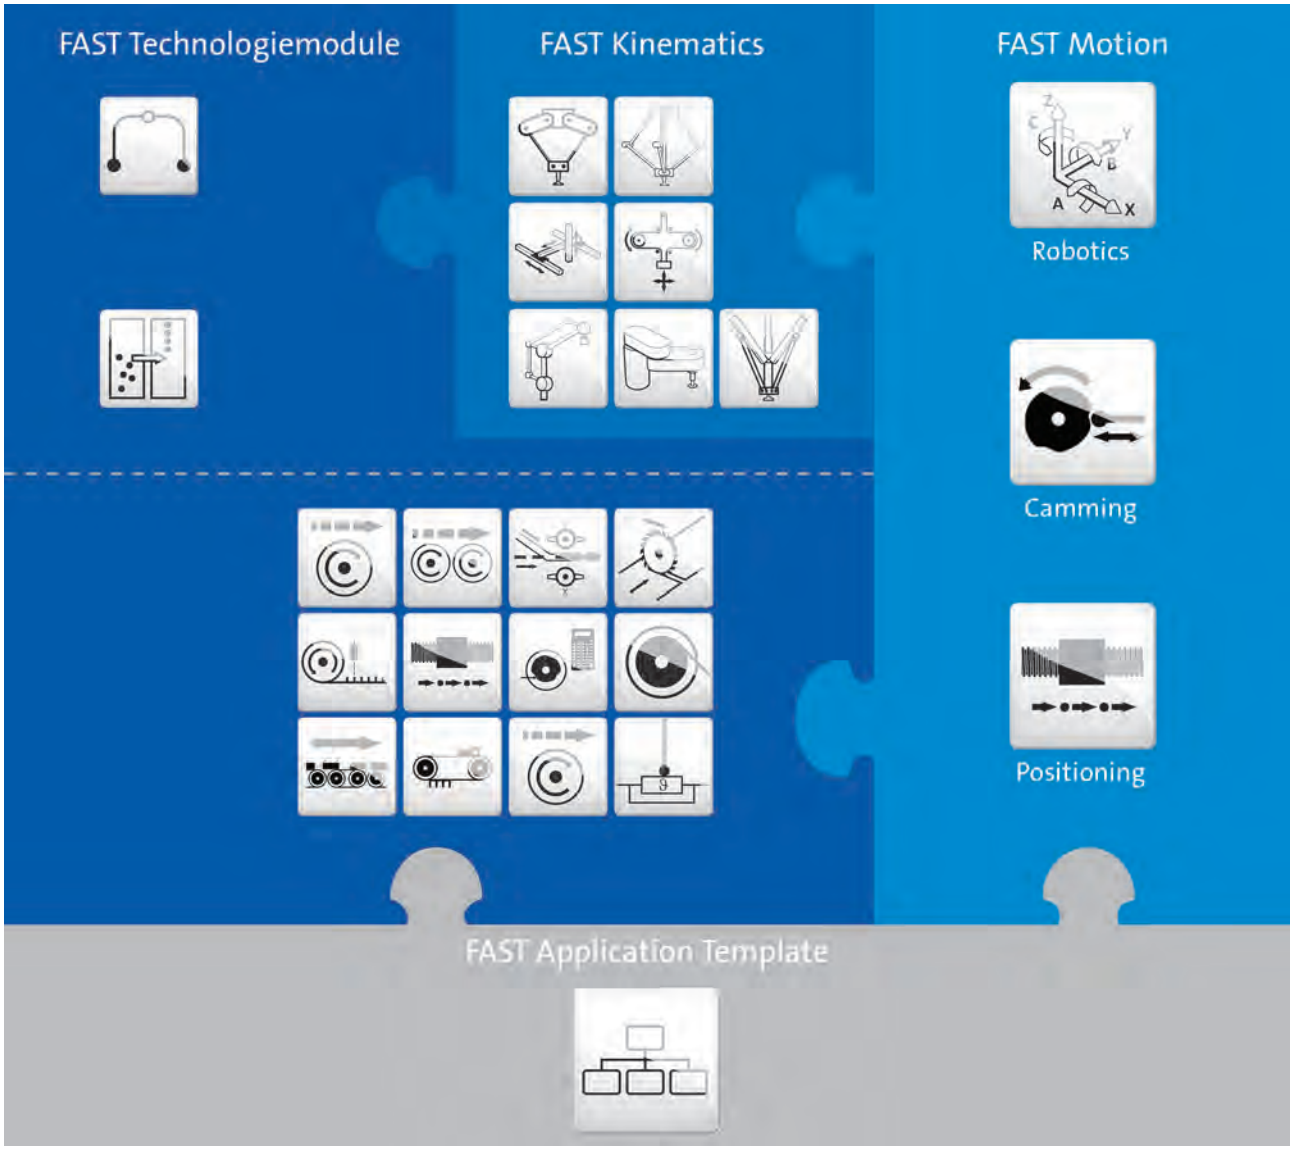
Variable front panel concept
- Easy customizing of the front panels (foils, smart customising)

Lenze FAST

Lenze FAST (Feasibly Applicable Software Toolbox) provides Lenze standard software modules for easily developing a modular machine control.

For this purpose, the »PLC Designer« engineering tool with the "FAST Application Template" provides for an easy programming and commissioning as standardised software structure and with predefined technology modules.

FAST Motion functions serve to implement individual extensions. The »EASY Starter« can be used to subsequently optimise and diagnose the system.



FAST Application Template

The FAST Application Template is standardised by Lenze for a modularised and clear programming in the »PLC Designer«.

The FAST Application Template can be used via a library in the »PLC Designer«. The library contains the structure and basic functionality of the FAST Application Template (as, for instance, state machine and error handling).

Lenze FAST

FAST technology modules

The predefined FAST technology modules serve to easily implement the desired machine functions.

The FAST technology modules are standardised software modules for a modular programming of the machine control. A FAST technology module features a complete and pre-tested drive function. Integrated basic functions and an integrated visualisation provide for an easy commissioning and testing of the modules. The reusability of the modules increases the quality of the software and considerably reduces the time required for programming, commissioning and testing.

The FAST technology modules are contained in the »PLC Designer« as independent function blocks in a library. They use the standardised interfaces and can thus be easily integrated into the machine program, combined in any way and extended individually with FAST Motion functions.

FAST Motion

FAST Motion provides full flexibility and scalability for machine programming and comprises optimised function blocks based on "PLCopen motion control":

- "Motion Control" modules (based on PLCopen Motion Control (formerly part 1+2) are optimised for the basic functions "positioning" and "cams" (synchronising).
- "Coordinated Motion" modules (based on PLCopen Coordinated Motion (part 4) are optimised for multi-axis coordinated three-dimensional movements – which can also be controlled via the FAST technology module "Pick & Place".

If the functionalities of the FAST technology modules are not sufficient, they can be adapted and extended individually using the FAST Motion modules. These modules are capable to program any number of functions.

The »PLC Designer« contains the "Motion Control" modules in two libraries and the "Coordinated Motion" modules in one library.

Technology module		Function	Points for use
Register control		Implementation of a clock-synchronised drive for generating a register control with print mark detection.	100
Winder Dancer		Implementation of a winding drive with dancer position control and/or a winding drive with tensile force/speed control	
Table Positioning		Positioning profiles for single axes with smoothing and touch probe positioning	50
Flying Saw		Cutting and processing of material while moving	100
Temperature Control		Control of the temperature of a system that is provided with a heating element and a thermal sensor.	50
Smart Track		Distribution of products via several conveying belts. An intelligent distribution results in optimum packaging of products.	
Magic Track		The preparation of single products to package them in groups. Is implemented comfortably with the two-pass conveyor.

FAST technology modules

Coordinated multi-axes drives

Technology module		Function	Kinematics		Function	Points for use
Pick&Place		Implementation of complex three-dimensional movements by means of profiles for up to four drives with different kinematics.	Portal		Universal Cartesian portal kinematics with 2, 3 and 4 degrees of freedom for Pick&Place with high load capacities and big workspaces	100
			Belt		Universally usable belt kinematics with 2 degrees of freedom *	
			Delta 2		Parallel kinematics with 2 degrees of freedom * for highly dynamic Pick&Place tasks	200
			Delta 3		Parallel kinematics with 3 degrees of freedom * for highly dynamic Pick&Place tasks	
			LinearDelta 3		Parallel kinematics with 3 degrees of freedom with linear axes for dynamic pick & place tasks.	
			Scara		Universal serial Scara kinematics with 2 and 3 degrees of freedom	
			Articulated P		Special form of an articulated arm kinematics with 4 degrees of freedom especially suitable for palletizing	
Track Pick & Place		Implementation of gripper movements which, for instance, pick up workpieces from a conveying belt and place or position them onto another conveying belt				300

FAST dimensioning

The FAST modules can be connected easily with the PLC Designer. Which module is to be selected, depends on the automation dimensioning of the machine. In order to define the correct Application Credit, the points of each module simply have to be added up. The required Application Credit is deducted each time a technology module is called.

Example 1:
- 1x Virtual Master (25 points)
- 1x Electrical Shaft (25 points)
- 2x Winder Dancer (200 points)
- 1x Cross Cutter (100 points)

Result: 350 points

Example 2:
- 1x Virtual Master (25 points)
- 1x Electrical Shaft (25 points)
- 2x Flex Cam (100 points)

Result: 150 points

Application Credit

FAST Motion

FAST Motion provides a scalable programming of function blocks based on "PLCopen Motion Control".
If you use the technology modules in the application, the basic functions of the FAST Motion are accessed both for single axes and for coordinated multi-axes systems.
If you do not want to use the technology modules for the motion control in your application, the application can, for instance, be implemented as well with your own program code on the basis of the FAST Motion.

Fast Motion		Function	Points for use
Motion Control		-	150
			
Coordinated Motion			300

If you use FAST technology modules, the Application Credit already includes the required function of the FAST Motion. In this case, no additional points have to be considered for the use of the FAST Motion.
If you use the FAST Motion as a basic function for the motion control, the points according to the FAST Motion table apply.

SD card and USB flash drive

SD cards and USB flash drives are available for data storage and data backups.

- ► A SD card is part of the scope of supply of the controller.
- ► SD card without Application Credit.

Mode		Features	Product key
Application Credit 0		• 512 MB

Product information

So small, and yet so powerful!
Based on the p500 panel controller, the new p300 fits seamlessly into our platform which is built on a consistently modern system architecture.
It combines logic (PLC) and visualisation in a compact device and is ideally suited to machine applications which only require a low processing power. With the same system properties as its older brother (p500), its true strength lies in its visualisation capabilities when used as an HMI.

Highlights

- Robust industry-compliant Panel Controller available in sizes 10.9 cm (4.3"),17.8 cm (7") and 26.4 cm (10.4")
- For basic to complex control and visualisation tasks
- Uniform engineering in all phases of the customer's machine development process
- High degree of system availability
  - Integrated UPS solution
  - Easy device replacement thanks to replaceable memory card
- No maintenance required thanks to batteryless and fanless design

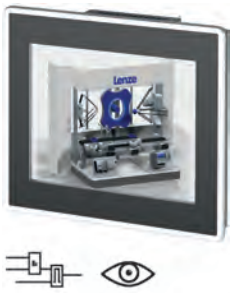
Variants

The p300 device series comprises 3 variants differing in the display size and therefore in the design and dimension of the front module. The panel controllers are available with screen diagonals of 10.9 cm (4.3"), 17.8 cm (7"), and 26.4 cm (10"). All technical properties of the controller unit are identical in this series.

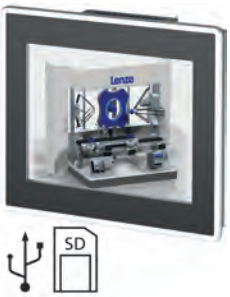
Operator control and process monitoring functions — p300 as HMI

The strength of the p300 lies in visualisation tasks. With the integrated VisiWinNET® visualisation system and the optional logic control system, the devices are also cost-effective and powerful complete systems for operator control and process monitoring. Thanks to tried-and-tested standard interfaces, the devices offer a variety of options for communication with the Lenze system world as well as with master controls.
For an easy dialog between people and machines.

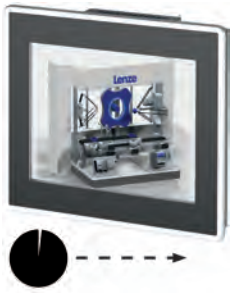
Product information



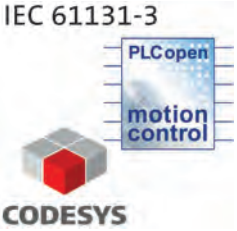
Logic (PLC) and visualisation in a single device
- Optimised for machines/modules with central motion control
- Easy engineering thanks to central data storage



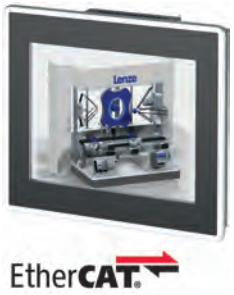
Easy to use
- Automated standard set-up and data backup via USB stick
- Easy device replacement by the pluggable SD card Application Credit 0
- Diagnostics via implemented web server or EASY Starter



High degree of system availability
- Maintenance-free
- Fanless
- No battery



Prepared for the future thanks to compliance with industrial standards
- Programming in IEC61131-3
- PLC Designer based on CODESYS 3



Communicative
- EtherCAT® as a fast bus system directly on board (in preparation)
- CANopen on board
- Precisely tailored by modular extension option

Variable front panel concept
- Easy customizing of the front panels (foils, smart customising)

I/O System 1000

I/O System 1000

Contents

Product information

Complies with the strictest requirements
The availability of Ethernet-based bus systems lays the foundations for new automation concepts in the field of machine and systems engineering — the performance limits of established bus systems are then eliminated.

The L-force I/O system 1000 offers highly deterministic control of input and output modules, which also includes importing touch probe inputs, such as those required for synchronised movements in clocked production processes. A minimum internal cycle time, in combination with a time stamp, ensures that the I/O system 1000 itself meets the strictest speed requirements here. As such, it is also suitable for use in realtime-based architectures.

At the very first glance, the system impresses with its slimline design, as well as its clearly structured labelling and diagnostics concept. The I/O modules, which offer space for 8 connections, require just 12.5 mm of space on the conventional DIN rail.

User-oriented connection technique
The "internals" of the I/O system are also user friendly down to the last detail: the I/O compound module, consisting of terminal block with backplane bus connection and electronics protected against polarity reversal, has a modular structure. This allows a defective electronic module to changed when maintenance work needs to be performed without the wiring from the base module having to be disconnected. Service engineers know that this eliminates a common source of errors – incorrect wiring. The stepped design of the connection level also offers advantages, including tension spring connection technology and permanent wiring, which has proven itself on standard terminals for years. For the wiring itself, a simple screwdriver is sufficient. The simple and clear system of labelling and wiring for the new system also makes it a breeze to combine modules to create complete stations. The integrated backplane bus allows up to 64 modules to be connected in any desired sequence by simply plugging them in without the need for any wiring.

Compact structure
- Slimline design
- 8 connection points in a width of just 12.5 mm
- Tried-and-tested tension spring technology
- Stair-step shaped, space-saving wiring level
- Consistent separation of electronics and the wiring level
- Up to 64 modules can be connected
- Automatic connection via the backplane bus

Performance and robustness
- Gold-plated contacts guarantee a secure connection between the modules
- Fault-tolerant protocols secure maximum availability – even in the event of individual frame errors
- The large bandwidth of 48 MBits/s allows extremely fast response times without telegram overheads

Product information

Permanent wiring
- 2-part concept: base module and electronic module
- The electronics can be replaced during maintenance work without touching the wiring
- The item designation remains on the base module
- Codes prevent the incorrect module type from being connected

>Fast diagnostics
- Clearly structured labelling and diagnostics concept
- Bright LEDs are easy to see, even in poorly illuminated control cabinets
- One LED and one labelling field is clearly assigned to each channel

Easy connection
- Circuit diagram and connection plan printed directly on the module
- Side: detailed view
- Front: simplified view, also visible when the modules have been installed

Integrated shield connection
- Brackets are available as accessories for shield buses
- Direct installation of standard 10 x 3 busbars on the I/O station
- Shield connection possible with standard cable attachments and shield clamps

No tools required for installation
- Direct snap-in installation on the DIN rail
- Individual module or entire station can be fitted
- Complete blocks can subsequently be attached to the DIN rail
- The release levers remain open, allowing complete stations to be fitted and removed

Scalable supply concept
- The main supply is a fixed component of the bus coupler and supplies both the electronics and the I/O level
- Additional I/O supply available as an option, in the event that more than 10 A output current is required
- Additional I/O supply and electronic supply available as an option for extremely large station structures
- Each new I/O supply forms a separate potential area

	Supply 4 x DC 24 V / 0 V	EPM-S912

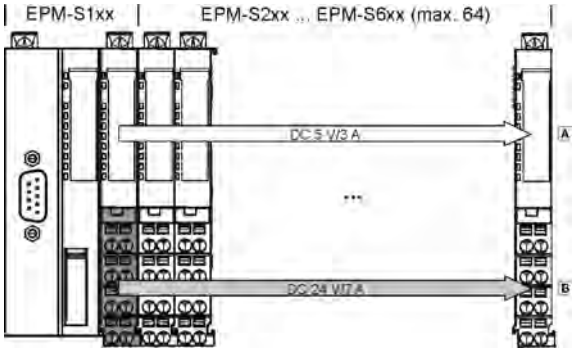
Compiling an I/O system

The I/O system 1000 can be used to create a very individual, tailored system for the most diverse of applications. A total of up to 64 I/O modules can be integrated.

Operation with bus coupler

The bus couplers are used to connect the I/O system to a control via a bus system, in which a 24V power supply module, the so-called main power supply, is integrated.

Properties of the power supply unit:
- 5V electronic supply of the bus coupler itself, as well as the connected modules.
  Maximum output current 3 A
- 24V I/O supply for the inputs and outputs of the connected modules
  Maximum output current 7 A (10 A if no UL-conformity is required in the field of deployment)

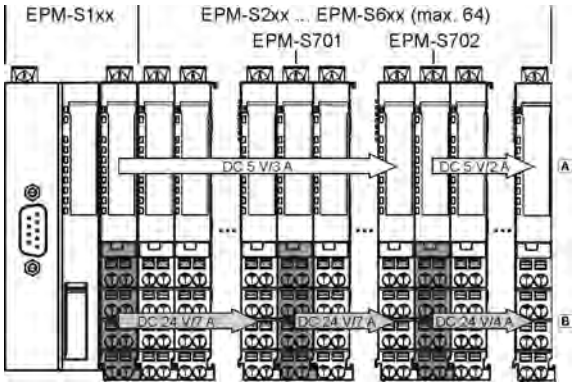


A: Electronics supply
B: I/O supply

Extension with power supply modules

In comprehensive systems, operation with just the DC supply via the bus coupler is sometimes not enough. In cases such as these, the I/O system can be extended with additional power supply modules.

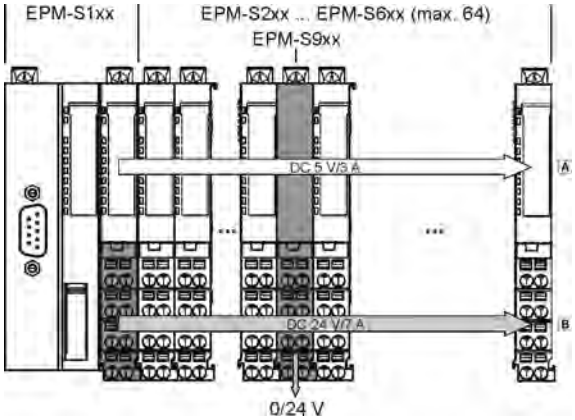
Depending on which supply is insufficient, there are two different modules available:
- Power supply module EPM-S701
  Additional I/O supply (7 A)
- Power supply module EPM-S702
  Additional electronics supply (2 A) and I/O supply (4 A)



A: Electronics supply
B: I/O supply

External supply

The I/O system can also be used to supply 24V consumers. This is particularly useful when using active sensors which need to be connected using three-wire conductors. Power distribution modules EPM-S91□ which, depending on their design, provide24 V and 0 V for connection of external sensor technology are available for this.



A: Electronics supply
B: I/O supply

Bracket for shield bus

Standard 10 x 3 busbars can be connected directly to the I/O system using the bracket for shield buses. The shield connection with standard cable attachments and shield clamps can be used.

Mode		Features	Product key
Bracket for shield bus		• Installation of standard metal rails for shield connections directly on the module (VPE 10 pieces)	EPM-S900

CAN bus connector

The connector is used to connect the CAN to inverters which are provided with a Sub-D connection for the CAN bus. An integrated CAN terminating resistor can be switched on/off. Internal spring terminals make the use of special mounting tools superfluous. The switch setting can be read from two sides.

Mode		Features	Product key
CAN bus connector: Node		• Sub-D, 90° • Screw terminals	EPM-T950
CAN bus connector: Terminating		• Sub-D, 90° • Screw terminals • Integrated terminating resistor	EPM-T951
CAN bus connector: Straight		• Sub-D, 180° • Screw terminals • Switchable terminating resistor	EPM-T952
CAN bus connector: Switch		• Sub-D, 90° • Spring-loaded terminal • Switchable terminating resistor	EWZ0046

Labelling strip

Mode		Features	Product key
Labelling strip		• DIN A4 white, precut Material: PET (water and oil resistant) Printing using a standard laser printer 102 labelling strips per sheet (VPE 10 sheets)	EPM-S990
